

“No Ordinary Lawsuit”: Climate Change, Due Process, and the Public Trust Doctrine

Michael C. Blumm* & Mary Christina Wood**

DRAFT – DO NOT DISTRIBUTE WITHOUT PERMISSION

*In November 2016, just two days after the election of President Donald Trump, the federal district court in Oregon handed down *Juliana v. Obama*, a remarkable decision that refused to dismiss a lawsuit brought by youth plaintiffs who claimed that federal government’s fossil fuel policies over the years—which have produced an atmosphere with dangerous levels of greenhouse gases (GHGs)—violated their federal constitutional rights to due process. The court also determined that the public trust doctrine (PTD) was an implicit part of due process and enforceable through the Constitution’s due process clause. If the youth plaintiffs are able to prove at a forthcoming trial that for decades the government willfully disregarded information about the potential catastrophic effects of GHG pollution, the decision could be a game-changer in global efforts to establish a sustainable climate policy that does not threaten future generations.*

*This article examines *Juliana*, its context as part of a worldwide campaign of “atmospheric trust” litigation, its pathbreaking reasoning, and its implications in the United State and abroad. The case may be—as it has been described—“the case of the century,” but that epithet will require the young plaintiffs to prevail at trial and a certain appeal to the Ninth Circuit and perhaps the Supreme Court. Even pending the trial and appeals, we think the case is—as the trial judge accurately recognized—“no ordinary lawsuit.”*

Introduction

I. The Climate Crisis

- A. Promoting Fossil Fuel Policy with Little Regard For the Consequences
- B. Restoring Climate Stability: The Scientific Prescription

II. Atmospheric Trust Litigation (ATL) and the *Juliana* case

III. The Procedural Threshold

- A. The Political Question Defense
- B. Standing

IV. Fundamental Rights and the Environment

- A. A Fundamental Right to a “Climate System Capable of Sustaining Human Life”
- B. Challenging Government Inaction: The “Danger Creation” Exception

V. The Public Trust Doctrine and the Atmosphere

- A. The PTD as Implicit in Sovereignty
- B. The Scope of the PTD and the Duty of Protection
- C. The PTD as an Implicit Constitutional Right
- D. The Federal Public Trust Doctrine
- E. The PTD and Congressional Displacement
- F. The PTD and the Federal Property Clause

VI. *Juliana* and the Road Ahead

- A. The Ongoing Case: “The Trial of the Millennium”
 - 1. The Focus of *Juliana* Discovery
 - 2. The Industry on Trial
- B. Ripple Effects Across the Legal and Social Landscape
- C. The Remedy

VII. Atmospheric Trust and PTD Litigation Worldwide

- A. State Atmospheric Trust Litigation
 - 1. Overcoming Judicial Inertia
 - 2. Judicial Recognition of ATL’s Foundational Legal Principles
 - 3. Judicial Management of the Remedy
 - a. ATL in Massachusetts: *Kain v. Department of Environmental Protection*
 - a. ATL in Washington: *Foster v. Department of Ecology*
- B. Atmospheric Trust and PTD Litigation Worldwide

Conclusion

“I have no doubt that the right to a climate system capable of sustaining human life is fundamental to a free and ordered society.”

Judge Anne Aiken¹

Introduction

With no little irony, as humanity attempts to reverse course before plunging over a climate cliff, the American public elected a president bent on accelerating fossil-fuel production. The year 2016 closed as the hottest year on record, and Arctic sea ice hit its lowest recorded level.² Heated ocean waters threaten vast marine ecosystems worldwide.³ The unprecedented urgency of greenhouse gas emission reduction arises out of nature’s “tipping points”—thresholds which can

trigger dangerous feedback processes that would unleash irreversible, “runaway” heating of destroying the balance of the planet’s climate system.⁴

In what scientists warn is a last opportunity to avert such climate tipping points, the world must rapidly restrict fossil fuel production and ultimately switch to safe renewable energy. Instead, President Trump—who claimed that climate change was a hoax perpetrated by the Chinese⁵—intends to spur production of \$50 trillion worth of shale, oil, coal, and natural gas.⁶ He ordered agencies to resurrect the Keystone and the Dakota Access Pipelines.⁷ He aims to open public land to increased oil and gas drilling and coal production,⁸ rescind Obama’s Clean Power Plan,⁹ resume oil and gas leasing on the Arctic and mid-Atlantic continental shelves,¹⁰ and withdraw from the Paris climate agreement.¹¹ He selected the CEO of ExxonMobil, Rex Tillerson, as Secretary of State, and a known climate denier, Scott Pruitt, to head the EPA.

The scientific community has clearly warned that continued runaway greenhouse gas (GHG) emissions threatens irreversible atmospheric calamity. Author Fred Pearce stated, “[h]umanity faces a genuinely new situation ... a crisis for the entire life-support system of our civilization and our species.”¹² The cruel situation for young people is that actions taken during President Trump’s time in office may lock in a future of grave climate disruptions within their projected lifetimes and sea level rise that could inundate coastal cities around the globe, creating a fundamentally “different planet”—one not hospitable to human survival.¹³ Dr. James Hansen, formerly the nation’s chief climate scientist at NASA, has warned, "Failure to act with all deliberate speed...functionally becomes a decision to eliminate the option of preserving a habitable climate system.”¹⁴

Into this bleak and dangerous picture, groups of youth have stepped forward to defend the atmosphere from dangerous GHG emissions. In cases filed throughout the world over the past few years,¹⁵ they have asked courts to force a government response to the climate crisis and reduce GHG emissions. In late 2016, only two days after the election of President Trump, the children gained a remarkable victory when the federal district court of Oregon issued a landmark opinion

underscoring the validity of their claims, denying the government’s motion to dismiss, and allowing the case to go forward to trial.¹⁶ As the court in *Juliana v. U.S.* recognized at the outset of its opinion, this was “no ordinary lawsuit.”¹⁷ For the past several decades, environmental lawsuits have relied largely on statutes or regulations. *Juliana* is instead a human rights case, challenging the government’s entire fossil-fuel policy, based not only on an assertion of constitutional rights to inherit a stable climate system but also on due process and equal protection grounds. At a time of unprecedented climatic danger, the children have pursued a litigation strategy born from matching the law with the existential threat they face.

In *Juliana*, the youth plaintiffs contend that government’s fossil fuel policies have violated their fundamental constitutional rights to life, liberty, and property, breached the government’s constitutional public trust obligations, and discriminated against them in violation of equal protection principles.¹⁸ The court aptly recognized the case as a “civil rights action”—an action “of a different order than the typical environmental case”—alleging that federal actions “have so profoundly damaged our home planet that they threaten plaintiffs’ constitutional rights to life and liberty.”¹⁹ Judge Ann Aiken broke new legal ground, deciding that the children have a fundamental right to a climate system capable of sustaining human life.²⁰ This right, she concluded, is protected against federal government interference by both the due process and equal protection clauses of the U.S. Constitution²¹ as well as the public trust doctrine, which she found

¹⁹ *Id.* at *1 (civil rights action), *26 (different order, so profoundly damaged).

²⁰ *Id.* at *16–17.

²¹ U.S. CONST., Amend. V (“ . . . nor [shall any person] be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation”). Due process is also applicable to the states through the 14th Amendment. U.S. CONST., Amend. XIV.

to be implicit in due process and, indeed, implicit in sovereignty.²² The case will now proceed to trial on the issue of whether the government actually breached these constitutional rights.²³ At a time when the political system seems prepared to shun responsible climate action, the lawsuit may be the only legal mechanism that can “trump” the incumbent administration. If upheld on appeal, the case could be a legal game-changer for climate crisis—and perhaps for environmental law as a whole.

This article considers *Juliana* and its implications. Section I briefly describes the current climate crisis and the fossil-fuel production policies that drive it. Section II explains the wave of atmospheric trust litigation of which this lawsuit is a part. Section III proceeds to examine Judge Aiken’s preliminary rulings on procedural issues that required resolution before moving to the substantive claims. These issues, involving the political question doctrine and the young plaintiffs’ standing, concern the proper role of courts in the climate crisis. Section IV explores the court’s due process ruling and the concept of fundamental rights in American constitutional law, describing the *Juliana* decision as a logical extension of existing jurisprudence.

Section V proceeds to consider the public trust doctrine (PTD), which Judge Aiken decided was implicit in due process, and contends that court’s application of this ancient principle to the federal government was both well-founded and consistent with case law. Section VI explains the road ahead in *Juliana* by anticipating the next phase of the litigation, which will result in a trial. Section VII examines the international march of atmospheric trust litigation, of which the *Juliana* case is a part. A number of international cases have recognized fundamental environmental rights

²³ See *infra* § VI.A.

embedded in the PTD and expressed in “right to life” provisions of national constitutions.²⁴ The article concludes that *Juliana* could—and should—signal a significant change to environmental law—at the outset of an era in which the federal government seems quite prepared to wage a potentially deadly gamble with the future of young people.

I. The Climate Crisis²⁵

Despite climate denial in the halls of Congress,²⁶ there is little or no scientific question that the world has entered an era of climate instability, if not imminent catastrophe.²⁷ The planet recently surpassed 400 parts per million (ppm) of carbon dioxide (CO₂) in the atmosphere, “never to return below it in our lifetimes.”²⁸ Fifteen of the sixteen hottest years on record have occurred since 2001.²⁹ While the planet has heated about 2.4 degrees F. on average since the Industrial Revolution,³⁰ warming at the poles is more extreme, with winter month temperatures near the North Pole at times soaring between 36° to 50°F. above average.³¹ Ocean warming is melting ice

masses across the Arctic, Antarctica, and Greenland, setting record lows in ice measurements.³² Warmer water temperatures combined with planetary ice melt causes sea levels to rise.³³ In a recent study, Dr. Hansen, the former chief climate scientist at NASA, observed that continued heating will make it “impossible to avoid large-scale ice sheet disintegration with sea level rise of at least several meters.”³⁴ Such a sea level rise would leave most coastal cities uninhabitable.³⁵ Hansen thought that the cost to society of functionally losing of all coastal cities was “practically incalculable.”³⁶

Carbon emissions now devastate marine ecosystems. The oceans have absorbed more than ninety percent of the excess heat energy generated by fossil fuel consumption,³⁷ causing massive coral reef bleaching and death³⁸ as well as depleted oxygen levels in the ocean.³⁹ Marine

absorption of carbon dioxide from human emissions has made the oceans thirty percent more acidic than before the Industrial Revolution, jeopardizing shellfish survival.⁴⁰

Scientists warn that the world faces dangerous “tipping points” capable of triggering irreversible feedback processes that would unleash uncontrollable heating and destroy the planet’s climate system.⁴¹ Some ten years ago, the Ninth Circuit Court recognized this threat, stating that “climate change may be non-linear, meaning that there are positive feedback mechanisms that may push global warming past a dangerous threshold (the ‘tipping point’).”⁴² As an example of just one tipping point, vast areas of melting permafrost now release large amounts of CO₂ and methane (both GHGs) into the atmosphere, causing a feedback loop that further increases the temperature on Earth and, in turn, melts more permafrost, causing more release of GHGs.⁴³ Another feedback loop concerns the melting of ice sheets, because less ice remains to reflect heat away from Earth—a dynamic known as the albedo effect.⁴⁴

Delay in mounting an effective climate response allows tipping points—both known and as yet unidentified—to compound, requiring further drastic and severe countermeasures to prevent runaway heating. As the trial court judge in the Washington atmospheric trust case starkly put it,

“[The younger generations’] very survival depends upon the will of their elders to act now, decisively and unequivocally, to stem the tide of global warming by accelerating the reduction of emissions of GHG’s before doing so becomes first too costly and then too late.”⁴⁵

A. Promoting Fossil Fuel Policy with Little Regard For the Consequences

The increase of carbon dioxide in the atmosphere over the last 150 years is due to the combustion of fossil fuels since the Industrial Revolution.⁴⁶ Although China surpassed the U.S. as the highest annual CO₂ emitter in 2005, the United States remains the world’s largest cumulative emitter of carbon dioxide.⁴⁷ This responsibility for the lion’s share of emissions is hardly surprising given the government’s inexorable promotion of fossil fuels as the nation’s primary energy policy. For over a century, three fossil fuels—petroleum, coal, and natural gas—have accounted for over eighty percent of the total U.S. energy consumption.⁴⁸ Federal energy policy includes leasing of public lands for fossil fuel development and the undervaluing of royalty rates for the leased lands,⁴⁹ near automatic permitting approval for extraction,⁵⁰ continued underwriting of the fossil fuel sector (including subsidies for exploration, consumption, and exportation), and extensive financing of international fossil fuel projects.⁵¹

⁴⁵ See Order Affirming the Dept. of Ecology’s Denial of Pet. for Rule Making at 5, *Foster v. Wash. Dep’t of Ecology*, No. 14-2-25295-1 SEA (Wash. Super. Ct. Nov. 19, 2015).

⁴⁶ See *Sources of Greenhouse Gases*, EPA (2017), <https://www.epa.gov/ghgemissions/sources-greenhouse-gas-emissions>. Carbon dioxide makes up the greatest portion—about eighty-one percent—of total GHG emissions. See *Overview of Greenhouse Gases: Carbon Dioxide Emissions*, EPA (2017), <https://www.epa.gov/ghgemissions/overview-greenhouse-gases#carbon-dioxide>.

Sept. 10, 2015) [hereinafter Juliana Complaint], <http://ourchildrenstrust.org/sites/default/files/YouthAmendedComplaintAgainstUS.pdf>.

⁵⁰ See *id.* at para. 170 (pdf p. 65).

⁵¹ See Sonali Prasad et al., *Obama’s Dirty Secret: The Fossil Fuel Projects the US Littered Around the World*, THE GUARDIAN (Dec. 1, 2016, 7:00 AM), <https://www.theguardian.com/environment/2016/dec/01/obama-fossil-fuels-us-export-import-bank-energy-projects>; see also Juliana Complaint, *supra* note 49, at para. 177 (pdf p.66).

Public records reveal that the federal government has known for decades of the danger these fossil fuel-promoting policies pose to the planetary climate system that underpins human survival. For example, a 1965 report by President Lyndon Johnson’s Scientific Advisory Committee acknowledged that human-caused CO₂ emissions would risk “the health, longevity, livelihood, recreation, cleanliness and happiness of citizens who have no direct stake in their production, but cannot escape their influence.”⁵² In a 1990 report, “Policy Options for Stabilizing Global Climate,” the Environmental Protection Agency (EPA) reiterated the 1965 report’s conclusion that CO₂ was a dangerous anthropogenic pollutant.⁵³ The 1990 report called for a fifty percent reduction in total U.S. CO₂ emissions below 1990 levels by 2025 and set a goal of stabilizing atmospheric CO₂ concentrations at 350 ppm to ensure global warming did not exceed 1.5° C. above the preindustrial level.⁵⁴ The 1.5° C. heating limit was believed then—and is still widely viewed—to be the line beyond which irrevocable climate disruption lies. The 2015 Paris Climate Agreement defined the 1.5° C limit as an aspirational world-wide goal.⁵⁵

For decades, a wide spectrum of government agencies published reports, studies, and recommendations exposing the dangers of continued fossil fuel combustion.⁵⁶ But instead of responding to these warnings with decisive actions, U.S. energy policy has remained centered on

promoting fossil fuels. Indeed, over the course of decades, the fossil-fuel industry contributed hundreds of millions of dollars to political campaigns to purchase influence and thereby forestall regulation.⁵⁷ Consequently, there is today no comprehensive regulation or pricing of carbon dioxide emissions in the United States. The top fossil fuel producers have collectively reaped more than \$1 trillion in profits since the millennium, while the global damage and human death toll from climate chaos escalates worldwide.⁵⁸

B. Restoring Climate Stability: The Scientific Prescription

Although considerable climate harm is irrevocably underway, many leading scientists say it is still possible (albeit barely so) to restore climate equilibrium over the long term. Such an effort would require reducing atmospheric carbon dioxide levels to 350 ppm, the uppermost level to limit total average planetary heating to a safe zone of below 1.5° C.⁵⁹ In 2010, recognizing the need to quantify the emissions reduction necessary to stay within this safe zone, Dr. Hansen convened an international team of scientists to formulate a climate “prescription” for the planet.⁶⁰ This prescription remains a fulcrum for atmospheric trust litigation, representing best available science to define necessary action to avert climate catastrophe.

The Hansen prescription addressed both carbon emissions and the planet’s natural carbon absorption mechanisms, since they are inextricably linked. The first part of the climate prescription presents a trajectory—or “glidepath”—of annual emissions reduction towards an

⁶⁰ *Id.*

ultimate goal of near-zero emissions.⁶¹ To reach 350 ppm by the end of the century, the team prescribed global emissions reduction of six percent annually, beginning in year 2013.⁶² However, delaying reduction of carbon emissions increases sharply the level of necessary yearly reductions, perhaps to a point at which the reductions ultimately become too steep to plausibly salvage a habitable planet.⁶³ For example, the Hansen team estimated that, had concerted climate-action started in 2005—fifteen years after the 1990 EPA report recommending action—emissions reductions of just 3.5 percent a year could have restored climate equilibrium at 350 ppm by the end of the century. But after eight years of inaction, that figure climbed to six percent per year by 2013.⁶⁴ The scientists projected that if emissions reductions are delayed until 2020, the necessary annual global emissions reduction will rocket to fifteen percent per year.⁶⁵ At some point, the necessary cuts will become too drastic for society to accomplish on a global scale. As the Hansen team emphasized, “[I]t is urgent that large, long-term emissions reductions begin soon.”⁶⁶

Reducing emissions alone will not restore climate equilibrium, however. Because approximately forty percent of emissions persist in the atmosphere for over a thousand years at present removal rates, any climate restoration must also focus on removing much of the carbon dioxide that has already accumulated in the atmosphere.⁶⁷ Accordingly, the second part of the scientific climate prescription addressed the “drawdown” of carbon dioxide through massive

⁶⁷ See William Moomaw, *From Failure to Success: Reframing the Climate Treaty*, THE FLETCHER FORUM OF WORLD AFFAIRS (Feb. 10, 2014), <http://www.fletcherforum.org/home/2016/8/22/from-failure-to-success-reframing-the-climate-treaty?rq=From%20failure%20to%20success>.

reforestation (because trees naturally absorb carbon dioxide) and improved agricultural measures (because soil also absorbs carbon dioxide). The Hansen team calculated that a full-scale massive restoration program could draw down about 100 gigatons (GT) of carbon dioxide from the atmosphere, the amount in 2013 that was key to restoring atmospheric carbon levels to 350 ppm.⁶⁸ However, because emissions reduction did not materialize at the projected rate in 2013 (emissions dropped only by 0.6 percent, rather than six percent),⁶⁹ the drawdown amount must increase to compensate. Dr. Hansen calculated that further delay of emissions reduction for just three more years (until 2020) would increase the total CO₂ removal necessary by fifty percent, to 150 GT.⁷⁰

These are the daunting effects of delay—metaphorically, they amount to an exponential rise in interest on the mortgage humanity took out on the planet through unrestricted use of fossil fuels. As one scholar noted, limiting global warming to 1.5°C. at this point will take “a true world revolution.”⁷¹ A full and swift transition from fossil fuels to renewable fuels is feasible,⁷² but not likely forthcoming without legal pressure. As a recent analysis concluded, “the main barriers to 100 percent clean energy are social and political, not technical or economic.”⁷³ Such a transition would produce enormous co-benefits, preventing four to seven million deaths per year, creating some 20 million more jobs than would be lost in the transition, and stabilizing energy costs.⁷⁴ Phasing out fossil fuels also would liberate society from the massive collateral damage that fossil

fuel dependence imposes, including from pipeline leaks,⁷⁵ exploding trains,⁷⁶ marine oil spill pollution,⁷⁷ fracking-induced earthquakes, and groundwater pollution.⁷⁸

There are some signs that a transition is underway. As Richard Heinberg of the Post Carbon Institute has claimed, “Fossil fuels are on their way out one way or another.”⁷⁹ In fact, renewable energy already employs more people than the oil and gas industries,⁸⁰ and global investment in solar and wind is double that of fossil fuels.⁸¹ The reasons are simple: 1) the easy sources of fossil fuels have been tapped, so continuing to extract the remaining sources is less economically costly;⁸² and 2) the foundation of renewable energy sources is technology, not a fuel, so prices fall as efficiency increases.⁸³ However, as Bloomberg analyst Tom Randall observed,

relying on a market-driven transition is unrealistic: “[T]he shift to renewable energy isn’t happening fast enough to avoid the catastrophic legacy of fossil-fuel dependence.”⁸⁴

A comprehensive response to the climate crisis will consequently require more than simply encouraging renewable energy investment and development; it now will necessitate aggressive curtailment of fossil-fuel extraction. Analysts warn that potential carbon emissions from currently operating oil and gas fields in the United States alone can cause planetary heating greater than the 1.5°C. increase targeted in the Paris agreement.⁸⁵ If operating coal mines figure into the equation, the planet could surpass a 2°C. temperature rise.⁸⁶ Quite simply, time is of the essence. As the Hansen team declared, “[w]e have a global emergency.”⁸⁷

II. Atmospheric Trust Litigation (ATL) and the *Juliana* case

The *Juliana* case is part of a wave of atmospheric trust litigation launched by the non-profit organization, Our Children’s Trust. Recognizing that looming tipping points necessitate a rapid and decisive response to the planet’s atmospheric crisis—and that the crisis only worsened during several decades while the political branches indulged in climate-change denial—the ATL campaign has turned to the judiciary for eleventh-hour relief to force worldwide emissions reductions.⁸⁸ ATL is a full-scale, coordinated movement, with multiple suits pending and others

On the ATL campaign, see Mary Christina Wood, *Atmospheric Trust Litigation*, in ADJUDICATING CLIMATE CHANGE: STATE, NATIONAL, AND INTERNATIONAL APPROACHES (William C. G. Burns & Hari M. Osofsky eds., Cambridge Univ. Press 2009); Mary Christina Wood, *Atmospheric Trust Litigation Around the World*, in FIDUCIARY DUTY AND THE ATMOSPHERIC TRUST (Ken Coghill et al. eds. 2012).

teed up in different forums, all connected by a common template of science and law. As Professor Randall Abate has observed, “Within the past five years, ATL has been a primary focus of climate justice litigation and it has made significant progress in advancing its theory in U.S. and foreign domestic courts.”⁸⁹

The litigation campaign began in May 2011, when young people filed legal processes in every state in the U.S., launched a federal suit⁹⁰ and began plans for lawsuits in other countries as well.⁹¹ The suits and petitions were premised on the public trust doctrine, an ancient principle dating back 1500 years to public rights articulated in Roman law.⁹² The modernized principle characterizes essential natural resources as part of an enduring ecological endowment—a “trust”—and designates government actors as trustees over essential resources, charging them with fiduciary duties of protection and restoration to sustain these resources for the benefit of the present and future public.⁹³ The public trust principle exists in every state of the United States⁹⁴ and is evident in legal systems of nations throughout the world.⁹⁵ Professor Gerald Torres aptly described

⁸⁹ See Randall S. Abate, *Atmospheric Trust Litigation in the United States: Pipe Dream or Pipeline to Justice for Future Generations?* 561 (2016),

http://www.academia.edu/29932478/Atmospheric_Trust_Litigation_in_the_United_States_Pipe_Dream_or_Pipeline_to_Justice_for_Future_Generations; see also *id.* at 557 (“[S]everal state courts have embraced the concept of ATL as a potential strategy to address climate change regulation in the courts, and it is rapidly gaining support.”).

⁹⁰ The initial federal case, *Alec L. v. Jackson*, against the Obama administration was unsuccessful, as the D.C. district court dismissed the case, deciding that the public trust did not bind the federal government. See Abate, *supra* note 89, at section III (describing case).

BLUMM & MARY CHRISTINA WOOD, *THE PUBLIC TRUST DOCTRINE IN ENVIRONMENTAL AND NATURAL RESOURCES LAW* 333-64 (2d ed. 2015) (surveying the jurisprudence, constitutions, and statutes of India, the Philippines, Uganda, Kenya, Pakistan, South Africa, Norway, Sweden, Finland, and Canada, among others).

the principle as the “law’s DNA.”⁹⁶ With constitutional underpinnings, the public trust presents a fundamental-rights framework for articulating climate obligations that transcend jurisdictions across the planet.⁹⁷

The basic ATL case applies public trust principles to the atmosphere,⁹⁸ making the following claims: 1) the air and atmosphere, along with other vital natural resources, are within in the *res* of the public trust, and therefore subject to special sovereign obligations; 2) the legislature and its implementing agencies are public trustees; 3) both present and future generations of the public are beneficiaries of the public trust; 4) the government trustees owe a fiduciary duty of protection against “substantial impairment” of the air, atmosphere, and climate system, and they must restore its balance; 5) courts have a duty to enforce these trust obligations. Scores of cases make clear that the public trust principle imposes obligations separate from statutory law.⁹⁹ Throughout the course of the ATL campaign, law professors have submitted amicus briefs in key cases to explain the basis and scope of the public trust, its constitutional character, and its crucial role of the judiciary invoking the public trust in the climate crisis.¹⁰⁰

⁹⁶ Gerald Torres & Nathan Bellinger, *The Public Trust Doctrine: The Law’s DNA*, 4 WAKE FOREST J. L. & POLY 281, 283–85 (2014).

⁹⁷ Where specific constitutional or statutory provisions of a jurisdiction provide trust protection, the youth plaintiffs often have asserted those as well in their ATL complaints and administrative petitions. *See, e.g.*, Pet. for Original Jurisdiction, Barhaugh et al. v Montana, (Mass. Panhandle Yacht Club, Inc., 671 P.2d 1085, 1095 (Idaho 1983) (compliance with legislative authority alone is not sufficient to determine public trust compliance).

¹⁰⁰ For links to law professors’ *amicus* briefs filed in Oregon, North Carolina, New Mexico, and District of Columbia, see <https://www.ourchildrenstrust.org/lawlibrary/>.

The ATL approach recognizes that, in order to curb global warming, the law must reflect the actual physical, chemical, and biological requirements of the planet. The ATL petitions and lawsuits demand enforceable climate recovery plans from government trustees to reduce carbon emissions at the rate called for by best available science, epitomized by the scientific prescription described above.¹⁰¹ The campaign anticipates long-term implementation of climate recovery plans under continuing court supervision, a remedy adapted from other types of institutional litigation.¹⁰² Although conventional statutory approaches held promise when the world had several decades to confront the growing climate crisis, the deadlines imposed by nature’s tipping points now require a judicial remedy that can deliver widespread relief tailored to the rapid carbon emissions reduction necessary to avoid calamity.¹⁰³

Beyond its potential to offer relief on a macro-scale, the ATL campaign brings a fundamental rights approach to climate crisis. Statutory and regulatory law can be vulnerable to erratic political whims of the legislative and executive branches, suffering extreme destabilization from one administration to the next—evidenced by President Trump’s promised changes to the Obama climate initiatives.¹⁰⁴ The climate crisis demands broad, enduring, system-changing

¹⁰¹ See *supra* notes 59-87 and accompanying text. The initial prescription was developed by the scientific team for the litigation and disseminated in May, 2011. See MARY CHRISTINA WOOD, NATURE’S TRUST: ENVIRONMENTAL LAW FOR A NEW ECOLOGICAL AGE 221 (2013) (explaining the Hansen team’s climate prescription).

¹⁰² *Id.* at 240-247.

¹⁰³ Statutory law fractures government’s overall climate responsibility into isolated, disjointed parts falling to an array of separate agencies. Even when a statutory lawsuit is successful, it narrowly focuses on one contentious permit, rule, program, or other isolated action. Moreover, the remedies under statutory law are often procedural, typically returning the process to a recalcitrant agency free of continuing judicial supervision. Within the framework of a macro-remedy, however, statutory law provides many of the tools for accomplishing emissions reduction. For example, the Clean Air Act provides the EPA with authority to regulate emissions. See *infra* notes 319-330 and accompanying text.

¹⁰⁴ As the magistrate judge in *Juliana* observed, “[T]he intractability of the debates before Congress and state legislatures and the alleged valuing of short term economic interest despite the cost to human life, necessitates a need for the courts to evaluate the constitutional parameters of the action or inaction taken by the government.” Order and Findings & Recommendations at 8, *Juliana v. United States*, No. 6:15-cv-01517-TC (D. Or. April 8, 2014) [hereinafter *Juliana* Findings], <http://ourchildrenstrust.org/sites/default/files/16.04.08.OrderDenyingMTD.pdf>; see also Wood, et al., *supra* note 25.

solutions that hold the promise of protecting life, liberty, and property. As a complement to existing statutes, ATL aimed to set firm boundaries on political discretion through the assertion of fundamental rights of constitutional character that cannot be ignored by the current administration or any other.¹⁰⁵

The *Juliana* case was filed in the federal district court of Oregon September 2015 on behalf of 21 youth plaintiffs from across the United States,¹⁰⁶ challenging—quite literally—the entire fossil fuel policy of the United States. The suit named multiple federal agencies—those with control over the United States’ fossil-fuel policies—as defendants.¹⁰⁷ Early in the *Juliana* litigation, the fossil fuel industry intervened through trade associations, siding with the federal government in defending the U.S. fossil fuel policies.

The *Juliana* complaint asserted that the federal government has continued to violate the youngest generation’s constitutional rights and has both caused and allowed substantial impairment of essential natural resources protected by the public trust by promoting the development of fossil fuels.¹⁰⁸ The complaint described entire the fossil-fuel regime and chronicled its governmental support over decades through massive subsidies, regulatory permits, leasing, exploration, drilling and mining public lands and offshore areas, and approving export proposals. The youth plaintiffs alleged:

¹⁰⁵ See Wood, et al., *supra* note 25.

¹⁰⁶ See *Juliana* Complaint, *supra* note 49.

¹⁰⁷ In addition to President Obama himself, the defendants included the EPA and the Departments of Transportation, Energy, Interior, State, Commerce, Defense Agriculture, the Council on Environmental Quality, the Office of Management and Budget and the Office of Science and Technology Policy. *Juliana* Complaint, *supra* note 49, at pdf p. 2-3. The case also challenged a contested a fossil fuel export project, the Jordon Cove Liquified Natural Gas Terminal and its associated proposed pipeline, which would cross the state of Oregon.

¹⁰⁸ See *Juliana* Complaint, *supra* note 49, at 3. The federal district court in the District of Columbia an earlier case, *Alec L. v. Jackson*, in part on displacement grounds. *Alec L. v. Jackson*, 863 F. Supp. 2d 11 (D.D.C. 2012), *aff’d* *Alec L. ex rel. Loorz v. McCarthy*, 561 Fed. App’x 7 (D.C. Cir. 2014), *cert. denied*, 135 S. Ct. 774 (2014) (deciding that the Clean Air Act displaced the public trust claim).

For over fifty years, the United States of America has known that carbon dioxide (“CO2”) pollution from burning fossil fuels was causing global warming and dangerous climate change, and that continuing to burn fossil fuels would destabilize the climate system on which present and future generations of our nation depend for their wellbeing and survival. Defendants also knew the harmful impacts of their actions would significantly endanger Plaintiffs, with the damage persisting for millennia. Despite this knowledge, Defendants continued their policies and practices of allowing the exploitation of fossil fuels. . . . Defendants have acted with deliberate indifference to the peril they knowingly created.¹⁰⁹

The *Juliana* plaintiffs also charged that “[t]he present level of [GHG] emissions and [associated] warming, both realized and latent, are already in the zone of danger,” asserting that “our country is now in a period of carbon overshoot, with early consequences that are already threatening and that will, in the short term, rise to unbearable unless the [government] take[s] immediate action[.]”¹¹⁰ They also pointed out that the harm is likely to continue into the foreseeable future, particularly from ocean acidification, rising sea levels, and damaged fresh water resources.¹¹¹ Moreover, the youths alleged that the federal government—controlling over a quarter of the planet’s GHG emissions¹¹²—has no plan to constrain those emissions to levels that do not threaten the ecological functions of the planet.

The youths sought a judicial order requiring government defendants to prepare and implement an enforceable national remedial plan to stabilize the climate system in accordance with the best available science.¹¹³ As reflected in the Hansen’s team prescription described above,¹¹⁴ the plan must comprise both 1) a de-carbonization project to fully phase out fossil fuel emissions; and 2) a draw-down project to extract existing excess atmospheric CO₂.¹¹⁵ The plaintiffs seek

continuing court jurisdiction to monitor and enforce implementation of the national remedial plan.¹¹⁶

The youth plaintiffs gained an initial victory in the litigation in April 2016, when Magistrate Judge Thomas Coffin recommended denial of the government's and fossil fuel interveners' motions to dismiss in all aspects, finding that the due process and equal protection, and the federal public trust claim (implicit in the constitution) could go forward.¹¹⁷ Judge Coffin stated: "Given the allegations of direct or threatened direct harm, albeit shared by most of the population or future population, the court should be loath to decline standing to persons suffering an alleged concrete injury of a constitutional magnitude."¹¹⁸ Judge Coffin's findings were then reviewed by federal district court Judge Ann Aiken. Oral argument took place in September 2016, drawing hundreds of school children to the federal courthouse. In November 2016, Judge Aiken issued a groundbreaking 54-page opinion affirming Judge Coffin, validating the youth's claims, and denying the defendants' motions to dismiss.¹¹⁹ Judge Aiken's decision will allow them to prove their claims at trial.¹²⁰

POST (Mar. 9, 2017), https://www.washingtonpost.com/news/energy-environment/wp/2017/03/09/this-climate-lawsuit-could-change-everything-no-wonder-the-trump-administration-doesnt-want-it-going-to-trial/?utm_term=.439db8d23e84. On March 9, 2017, federal defendants filed a motion before Magistrate Judge Thomas Coffin to certify an order for an interlocutory appeal. Mem. In Supp. Of Federal Defs.' Mot. To Certify Order For Interlocutory Appeal, *Juliana v. U.S.*, No. 6:15-cv-01517-TC (D. Or. Mar. 7, 2017), <https://static1.squarespace.com/static/571d109b04426270152febe0/t/58c08d521b631b9e64284395/1489014099526/Doc+120-1+Memo+in+Support+of+Fed+Motion+to+Certify+Order+for+Interlocutory+Appeal.pdf>.

III. Procedural Thresholds

Before reaching the merits of the youths' claims, the court considered two preliminary issues. Judge Aiken rejected the government's arguments that the case involved an unreviewable political question, relying heavily on the Supreme Court's criteria for political questions established in *Baker v. Carr*,¹²¹ the landmark redistricting case.¹²² Judge Aiken also dismissed the government's allegation that the youths lacked standing.¹²³ We consider each of these preliminary matters in turn.

A. The Political Question Defense

The fossil-fuel industry intervenors and the government contended that the court lacked jurisdiction because the case involved a non-justiciable political question, an issue the government had successfully invoked in some other cases.¹²⁴ The political question doctrine, first articulated by Chief Justice John Marshall in *Marbury v. Madison*,¹²⁵ forecloses judicial review of certain questions that courts determine are more appropriate for resolution by the political branches of government.¹²⁶

¹²¹ 369 U.S. 186 (1962) (articulating the modern version of the political question doctrine and ruling that redistricting was not an unreviewable political question).

¹²² See *Juliana*, at *5-8, discussing in detail the six criteria established in *Baker*, 369 U.S. at 217.

¹²³ *Id.* at *9-14 (finding that the plaintiffs met the standing requirements of injury-in-fact, causation, and redressability).

¹²⁴ See, e.g., *Alex L v. Jackson*, 863 F.Supp.2d 11, 16–17 (D.D.C. 2012), *aff'd, sub nom.* *Alex L ex rel. Loorz, v. McCarthy*, 561 F.Appx. 7 (D.C. Cir. 2014) (mem.); *Sanders-Reed v. Martinez*, 350 P.3d 1221, 1225-27 (N.M. App. 2015) (New Mexico constitution imposes a public trust duty on the state, but the state incorporated that duty into the state's Air Quality Act, which provides the exclusive scheme for reviewing administrative decisions, in part because of separation of power grounds); *Barhaugh et al. v. Montana*, No. OP 11-0258 (Mont. 2011) (refusing to consider plaintiff's case because it did not involve "purely legal questions). *But see Kanuk v. State, Dept. of Natural Resources*, 335 P.3d 1088, 1097-1103 (Alaska 2014) (deciding that the public trust doctrine was not a political question, but dismissing three of the plaintiffs' claims because they involved a policy question falling within the competency of political branches of government, and others because relief was not prudential); *Butler ex rel. Peshlakai v. Brewer*, 2013 WL 1091209 (D. Az. 2013) (rejecting the state's argument that "the determinations of what resources are included in the [Public Trust] Doctrine and whether the State has violated the Doctrine are non-justiciable.").

¹²⁵ 5 U.S. (1 Cranch.) 137, 170 (1803).

¹²⁶ See JOHN E. NOWAK & RONALD D. ROTUNDA, CONSTITUTIONAL LAW § 2.15 (7th ed. 2004).

In *Baker v. Carr*, which ruled that political redistricting was not immune from judicial review under the political question doctrine, Justice William Brennan identified several criteria by which courts may identify political questions, the most important of which are: 1) a demonstrable commitment to non-judicial branch of government, 2) a lack of judicially manageable standards for resolving an issue, and 3) the impossibility of deciding the dispute without an initial policy choice clearly appropriate for non-judicial discretion.¹²⁷

Judge Aiken engaged in a searching inquiry of the political question doctrine, noting its importance in assuring an appropriate balance of power between the three branches of government.¹²⁸ As she noted, “a court cannot simply err on the side of declining to exercise jurisdiction when it fears a political question may exist; it must instead diligently map the precise limits of jurisdiction.”¹²⁹ Judge Aiken determined that the first factor did not apply because “climate change policy is not *inherently*, or even primarily a foreign policy decision.”¹³⁰ She proceeded to conclude that the other two factors were likewise inapplicable because the plaintiffs did indeed present a dispute within the court’s competence. Observing that plaintiffs charged that the government’s “*aggregate actions* violate[d] their substantive due process rights and the

¹²⁷ 369 U.S. 186, 217 (1962), cited by *Juliana*, at *6–7. Other criteria Brennan identified were 1) the impossibility of a court’s resolving an issue without expressing a lack of respect to coordinate branches; 2) an unusual need to adhere to a political decision already made; and 3) the potential of embarrassment from multifarious pronouncements by various branches to the same issue. *Id.* The intervenor-defendants argued only the first three of the *Baker* factors.

¹²⁸ *Juliana*, at *3 (“The political question doctrine is ‘primarily a function of the separation of powers.’”)(citing *Baker*, 369 U.S. at 210). While this discussion focuses on the three Baker factors that the intervenor defendants contended were implicated, Judge, Aiken’s detailed and careful analysis addressed all six of the Baker factors, concluding that the case implicated none.

¹²⁹ *Juliana*, at *4.

¹³⁰ *Id.* at *6 (emphasis in original).

government's trust obligations,"¹³¹ Judge Aiken emphasized that constitutional rights asserted by the plaintiffs put the case "squarely within the purview of the judiciary."¹³²

The defendants complained that, by not identifying violations of statutory or regulator law, the plaintiffs left the court without standards to apply. But Judge Aiken observed:

Plaintiffs could have brought a lawsuit predicted on technical regulatory violations, but they chose a different path. As masters of their complaint, they have elected to assert constitutional rather than statutory claims. Every day, federal courts apply the legal standards governing due process claims to new sets of facts. The facts in this case, though novel, are amenable to those well-established standards.¹³³

The court recognized that the plaintiffs sought broad-based relief in the form of a national remedial plan, and that "[t]he court could issue the requested declaration without directing any individual agency to take any particular action." She acknowledged that the court would have to "exercise great care" in fashioning a remedy that would "avoid separation-of-powers problems," perhaps by declaring that the government must "ameliorate plaintiffs' injuries" but not "specify[ing] precisely how to do so."¹³⁴

The recent decision of the Ninth Circuit in *Washington v. Trump*, upholding a district court injunction of the initial Trump executive order on immigration, may be a harbinger of how the Ninth Circuit could react to Judge Aiken's opinion. A unanimous panel of the court rejected the

¹³¹ *Id.* at *7 (emphasis in original). The court stated that the "plaintiffs do not ask this Court to pinpoint the 'best' emissions level; they ask this Court to determine what emission level would be sufficient to redress their injuries. That question can be answered without any consideration of competing interests." *Id.* at *6. The court also dismissed the other *Baker* factors, because she noted that these factors should only rarely make a case nonjusticiable. *Id.* at *7. She explained that a judicial declaration of the plaintiffs' due process rights would be fully consistent with international commitments, would not interfere with "a political decision already made," or produce an "embarrassment" to the other branches of government. *Id.* at *8.

¹³² *Id.* at *8. The court noted that the youth plaintiffs shared "key features" with the *Baker* plaintiffs in that they are "minors who cannot vote and must depend on others to protect their political interests," and thus their claims are "rooted in a 'debasing of their votes.'" *Id.* (citing amicus brief submitted by the League of Women Voters).

¹³³ *Id.* at *7.

¹³⁴ *Id.* at *9. The court observed that "speculation about the difficulty of crafting a remedy could not support a dismissal at this early stage" of the litigation. *Id.*

federal government’s argument that the president’s immigration decisions, especially when motivated by national security, were not judicially reviewable, a position quite similar to the government’s invocation of the political question doctrine in *Juliana*.¹³⁵ The court had little difficulty in rejecting this claim, explaining that courts “routinely review—and even invalidate—actions taken by the executive to promote national security.”¹³⁶ The Ninth Circuit panel explained that a claim of unreviewability of executive and legislative acts “runs counter to the fundamental structure of our constitutional democracy” and concluded that it was “beyond question” the federal judiciary may remedy constitutional violations by the Executive.¹³⁷ If alleged actions in defense of national security are reviewable, the dangerous atmospheric pollution at issue in *Juliana* should be no less so.

B. Standing

Government and industry defendants also challenged the standing of the twenty-one youth plaintiffs in the *Juliana* case. As a threshold inquiry, standing requires the plaintiff to demonstrate that the injury complained of is: 1) concrete, particularized, and actual or imminent; 2) fairly traceable to the defendant’s conduct; and 3) likely to be redressed by a favorable court decision.¹³⁸ With respect to the first factor (concrete harm), nearly thirty pages of the youth plaintiffs’ complaint detailed specific harm already happening to plaintiffs as a result of climate disruption in their regions.¹³⁹ In the opening oral argument in the *Juliana* case, plaintiffs’ attorney introduced Jayden F., a 13-year old Louisiana plaintiff sitting before the court, as a victim of extreme flooding

¹³⁵ See *supra* notes 124–26 and accompanying text.

¹³⁶ *Washington v. Trump*, No. 17-35105, D.C. No. 2:17-cv-00141, at 17 (Feb. 7, 2017) (per curiam order) (citing *Boumediene v. Bush*, 553 U.S. 723 (2008) (upholding federal habeas jurisdiction despite executive and congressional objection over so-called “enemy combatants”).

¹³⁷ *Id.* at 14 (also quoting the Supreme Court in *Boumediene*, 553 U.S. at 765, to the effect that the “political branches” lack the authority “to switch the Constitution on or off at will”), 18 (“beyond question”).

¹³⁸ *Juliana*, at *9.

¹³⁹ *Juliana* Complaint, *supra* note 49, at 6-33.

just two weeks prior—a flood event that would normally happen every 1,000 years but is occurring now allegedly as a result of climate change.¹⁴⁰ The government argued that, because climate harm affects everyone on Earth, plaintiffs’ injuries amounted to a “nonjusticiable generalized grievance” defeating the case or controversy requirement of Article III of the Constitution. The court thought otherwise, citing a plethora of cases holding that a plaintiff asserting a “concrete and particularized injury” does not lack standing even if many others experience harm from the same action.¹⁴¹ The opinion highlighted the plight of Jayden, noting that she and her siblings woke up in their house on August 13, 2016 to find floodwaters “pouring into our home through every possible opening” and “a stream of sewage and water running through our house.”¹⁴² The court found also found “concrete and particularized” harm that is “actual or imminent,” from other harms alleged in the complaint such as 1) drought that damaged salmon harvests; 2) high temperatures that harmed orchards and required new irrigation systems; 3) decreased snowpack that inhibited recreational skiing; 4) forest fires that injured asthmatics; and 5) algae blooms harming drinking water supplies.¹⁴³

As to the second standing factor, the court determined that the plaintiffs’ injuries were “fairly traceable” to the challenged government actions and inactions because—at least at the

¹⁴⁰ See, e.g., John Upton, *Louisiana Floods Directly Linked to Climate Change*, Climate Central (Sept. 7, 2016), <http://www.climatecentral.org/news/louisiana-floods-directly-linked-to-climate-change-20671>; Ian Urbina, *Perils of Climate Change Could Swamp Coastal Real Estate*, N.Y. TIMES, Nov. 24, 2016, https://www.nytimes.com/2016/11/24/science/global-warming-coastal-real-estate.html?_r=0 (last visited Mar. 30, 2017); Lauren Sommer, *With Climate Change, California is Likely to See More Extreme Flooding*, NPR, Feb. 28, 2017, <http://www.npr.org/2017/02/28/517495739/with-climate-change-california-is-likely-to-see-more-extreme-flooding> (last visited Mar. 30, 2017).

¹⁴¹ *Juliana*, at *9 (observing that “the possibility that some other individual or entity might later cause the same injury does not defeat standing—the question is whether the injury *caused by the defendant* can be redressed”) (emphasis the court’s).

¹⁴² *Id.* at *9-10 (also noting, “With no shelters available and nowhere else to go, the family remained in the flooded house for weeks,” sleeping together in the living room because “the bedrooms are uninhabitable.”).

¹⁴³ See *id.* at *9, 11.

motion to dismiss stage—she was bound to accept the plaintiffs’ allegations as true.¹⁴⁴ Judge Aiken also noted that the federal government was responsible for “a substantial share” of worldwide GHG emissions, as the second-largest producer and consumer of global carbon dioxide emissions.¹⁴⁵ The court decided that although causal chains may be difficult to prove on the merits, at the pleading stage they were sufficient to allege a satisfactory causal link between the government’s conduct and the alleged injuries.¹⁴⁶

Finally, as to the third factor, Judge Aiken decided that the youths’ injuries could be redressed by judicial relief, since the federal government controlled a substantial amount of global GHG emissions,¹⁴⁷ and a reduction of those emissions would reduce atmospheric pollutions and slow climate change.¹⁴⁸ The fact that there was some uncertainty was not disabling, since all that was required is a “substantial likelihood that the Court could provide meaningful relief.”¹⁴⁹ The plaintiffs’ request that the court order the government to “cease their permitting, authorizing, and subsidizing fossil fuels” and “ensure that atmospheric [carbon pollution] is no more concentrated than 350 [parts per million] by 2100” through a national plan to stabilize the climate was, according to Judge Aiken, adequate to establish standing to sue.¹⁵⁰

¹⁴⁴ *Id.* at *12 (observing that at “at the motion to dismiss stage, a federal court is in no position to say it is impossible to introduce evidence to support a well-pleaded causal connection . . .”, and that “climate science is constantly evolving”).

¹⁴⁵ *Id.* The court observed that for 263 years, the United States has produced over 25% of global carbon dioxide emissions, *id.*, and that the plaintiffs had articulated a plausible chain of causation: government agencies with jurisdiction over 64% of U.S. carbon dioxide emissions (and 14% of global emissions), “allow[ing] high emission levels by failing to set demanding standards; high emissions levels cause climate change; and climate change causes plaintiffs’ injuries.” *Id.* at *13.

¹⁵⁰ *Id.* at *14.

IV. Fundamental Rights and the Environment

Although the young plaintiffs set forth several distinct constitutional claims arising from separate provisions of the U.S. Constitution, the court referred to those for simplicity's sake as "due process claims." One of the plaintiffs' due process claims arose from the contention that the government tolerated or caused GHG emissions "to rise to levels that dangerously interfere with a stable climate system," thereby knowingly endangering their health and welfare and, even after recognizing the dangerous situation, perpetuated the danger by continuing to promote and allow dangerous levels of fossil-fuel production, consumption, and combustion.¹⁵¹ Addressing a subset of plaintiffs' due process and equal protection claims, the court engaged in an inquiry as to whether the right to a climate system capable of sustaining human life is a fundamental constitutional right.¹⁵² Protection of fundamental rights requires strict scrutiny from the courts and may not be infringed unless the action serves a compelling state interest, and the government tailors the infringement narrowly.¹⁵³ Without such close judicial review, Judge Aiken thought that the government's "affirmative actions would survive rational basis review."¹⁵⁴

A. A Fundamental Right to a "Climate System Capable of Sustaining Human Life"

Fundamental liberty rights may be express in the Constitution or "1) deeply rooted in this Nation's history and tradition or 2) fundamental to our scheme of ordered liberty."¹⁵⁵ Aware that

¹⁵¹ *Id.* The complaint stated three claims based on express provisions of the constitution. See *Juliana* Complaint, *supra* note 49. The first claim asserted violation of the Due Process Clause of the Fifth Amendment. The second claim asserted violation of "Equal Protection Principles Embedded in the Fifth Amendment." The third claim asserted violations of the "Unenumerated Rights Preserved for the People by the Ninth Amendment." Although the court failed to address all of the claims in detail, distinctions between them may become pivotal in the fact-finding stage. Discussion of that aspect is beyond the scope of this article.

¹⁵² *Id.* (stating that resolution of the due process claim "therefore hinges on whether plaintiffs have alleged infringement of a fundamental right.").

¹⁵³ *Id.* *14-15 (citing *Reno v. Flores*, 507 U.S. 292, 302 (1993)).

¹⁵⁴ *Id.* at *14.

¹⁵⁵ *Id.* at *15 (citing *McDonald v. City of Chicago, Ill.*, 561 U.S. 742, 767 (2010)).

the Supreme Court has cautioned that such rights be articulated only with the “utmost care,”¹⁵⁶ Judge Aiken turned for guidance to recent Supreme Court decisions announcing fundamental liberty rights to privacy, procreation, and marriage.¹⁵⁷ Quoting Justice Kennedy’s admonition in the right to marry case, *Obergefell v. Hodges*, that “we may not always perceive injustice in our own times,”¹⁵⁸ Judge Aiken understood that a court must exercise “reasoned judgment” when deciding on fundamental rights. She recognized that “identification and protection of fundamental rights is an enduring part of the judicial duty to interpret the Constitution.”¹⁵⁹ She also observed that the marriage right recognized by the Court supported other vital liberties like the family and social order.¹⁶⁰

With these background principles in mind, Judge Aiken articulated a fundamental liberty right to a “climate system capable of sustaining human life,” saying that she had “no doubt that the right to a climate system capable of sustaining human life is fundamental to a free and ordered society.”¹⁶¹ She reasoned that “[j]ust as marriage is the ‘foundation of the family,’ a stable climate system is quite literally the foundation ‘of society, without which there would be neither civilization nor progress.’”¹⁶² Aiken rejected the government’s characterization that the youth

¹⁵⁶ *Id.* (citing *Washington v. Glucksberg*, 521 U.S. 720 (1997)).

¹⁵⁷ *Id.* at *15 (citing *Roe v. Wade*, 410 U.S. 113, 152-53 (1973) (privacy and procreation, including the right to an abortion); *Obergefell v. Hodges*, 135 S.Ct. 2584, 2598 (2015) (marriage)).

¹⁵⁸ *Id.*, quoting Justice Kennedy in *Obergefell*, 135 S.Ct. at 2598:

The nature of injustice is that we may not always see it in our own times. The generations that wrote and ratified the Bill of Rights . . . did not presume to know the extent of freedom in all its dimensions, and so they entrusted to future generations a charter protecting the right of all persons to enjoy liberty as we learn its meaning. When a new insight reveals discord between the Constitution’s central protections and a received legal scheme, a claim to liberty must be addressed.

¹⁵⁹ *Id.* at *15–16 (quoting *Obergefell*, 135 S.Ct. at 2598). She also quoted *Obergefell* to the effect that the responsibility to declared fundamental rights “has not been reduced to any formula . . . [h]istory and tradition guide and discipline this inquiry but do not set its outer boundaries, [since] future generations [may] protect . . . the right of all persons to enjoy liberty as we learn its meaning.” *Id.* at *15 (quoting *Obergefell*, 135 S.Ct. at 2598).

¹⁶⁰ *Id.* at *15 (citing *Obergefell*, 135 S.Ct. at 2599, 2561).

¹⁶¹ *Id.*

¹⁶² *Id.* (quoting *Obergefell*, 135 S.Ct. at 2598). The court also cited a case from The Philippines Supreme Court, *Oposa v. Factoran.*, GR No. 101083, 33 LL.M. 173, 187-88 S.C., Jul. 30, 1993 (Phil.) (without “a balanced and healthful ecology,” future generations “stand to inherit nothing but parched earth incapable of sustaining life.”).

plaintiffs sought freedom from all pollution, describing their claim as one that argued only against GHG pollution that threatened catastrophic results.¹⁶³ She concluded that if the right to marry was fundamental, the right to a stable climate system was as well.¹⁶⁴ Otherwise, she opined, “the Constitution [would] afford[] no protection against a government’s knowing decision to poison the air its citizens breathe or the water its citizens drink.”¹⁶⁵

Although the court relied heavily on the marriage and procreation decisions,¹⁶⁶ it might have cited several other fundamental rights declared by the Supreme Court over the years.¹⁶⁷ For example, the right of privacy is fundamental, even though it is implicit,¹⁶⁸ protecting marital, child-rearing, and private sexual choices.¹⁶⁹ Similarly, the right to vote and participate in the political process is a fundamental liberty,¹⁷⁰ as is the right to travel interstate.¹⁷¹ There are also fundamental rights to fair process in criminal cases and in government deprivations of property and liberty.¹⁷² These decisions make clear that the Supreme Court has a long history of finding fundamental rights

¹⁶³ *Id.* at *16 (“Plaintiffs do not object to the government’s role in producing *any* pollution or causing *any* climate change; rather, they assert the government has caused pollution and climate change on a catastrophic level, and that if the government’s actions continue unchecked, they will permanently and irreversibly damage plaintiffs’ property, their economic livelihood, their recreational opportunities, their health, and ultimately their (and their children’s) ability to live long, healthy lives.”) (emphasis in original).

¹⁶⁴ *Id.* (“Echoing *Obergefell*’s reasoning, plaintiffs allege a stable climate is a necessary condition to exercising other rights to life, liberty, and property.”).

¹⁶⁵ *Id.*

¹⁶⁶ *Id.* at *15–16 (citing *Obergefell v. Hodges*, 135 S.Ct. 2584, 2598, 2599, 2601 (2015); and *Roe v. Wade*, 410 U.S. 113, 152-53 (1973)).

¹⁶⁷ See JOHN E. NOWAK & RONALD D. ROTUNDA, *CONSTITUTIONAL LAW* § 11.7 (7th ed. 2004); AKHIL REED AMAR, *AMERICA’S CONSTITUTION: A BIOGRAPHY* 385 (2005).

¹⁶⁸ *Griswold v. Connecticut*, 381 U.S. 479 (1965) (right of privacy protected by the “penumbras” of several constitutional provisions, including due process).

¹⁶⁹ See, e.g., *Boddie v. Connecticut*, 401 U.S. 371 (1971) (welfare recipients could not be denied the right to divorce because of high court fees); *Loving v. Virginia*, 388 U.S. 1 (1967) (striking down a state law outlawing mixed-race marriages); *Pierce v. Society of Sisters*, 268 U.S. 510 (1925) (striking down an initiative forbidding parochial schools); *Meyer v. Nebraska*, 262 U.S. 390 (1923) (striking down a state statute forbidding teaching German in public schools); *Lawrence v. Texas*, 539 U.S. 558 (2003) (striking down a state statute forbidding sodomy).

¹⁷⁰ *Harper v. Virginia State Bd. of Elections*, 383 U.S. 663 (1966) (striking down a state poll tax); *Carrington v. Rash*, 380 U.S. 89 (1965) (striking down a state law prohibiting members of the armed forces from moving to Texas and voting while in the service).

¹⁷¹ *Shapiro v. Thompson*, 394 U.S. 618 (1969) (striking down a state law requiring a year of residency to collect welfare payments, although as a violation of equal protection, not due process).

¹⁷² See NOWAK & ROTUNDA, *supra* note 166, at 471-72 (citing cases).

implicit in the Constitution. The *Juliana* result harmonizes with the judiciary’s approach to defining other fundamental rights. If rights to privacy, procreation, marriage, and interstate travel are recognized as fundamental liberty rights, the right to a healthful atmosphere that can sustain human life and protect property must also be fundamental, as it forms the linchpin to survival and, indeed, the exercise of all other political and civil fundamental rights.¹⁷³

Judge Aiken did not suggest that all environmental claims were protected by the due process clause; she limited her decision to “the right to a climate system capable of sustaining human life,” and she clarified that such an approach would not transform “any minor or even moderate act that contributes to the warming of the planet into a constitutional violation.”¹⁷⁴ But those acts that “affirmatively and substantially damag[e] the climate system in a way that will cause human deaths, shorten lifespans, result in widespread damage to property, threaten human food sources, and dramatically alter the planet’s ecosystem” would, according to Judge Aiken, violate due process.¹⁷⁵

B. Challenging Government Inaction: The “Danger Creation” Exception

Judge Aiken recognized that, with limited exceptions, the due process clause does not impose an affirmative obligation on government to take action even where necessary to protect due process rights.¹⁷⁶ One such exception—the “danger creation” exception—arises when

¹⁷³ Judge Aiken reserved questions of whether the government’s actually violated the plaintiffs’ due process and public trust rights for trial.

¹⁷⁴ *Juliana*, at *15–16.

¹⁷⁵ *Id.* at *16 (“I intend to strike a balance and to provide some protection against the constitutionalization of all environmental claims.”).

¹⁷⁶ *Juliana*, at *16 (citing *Deshaney v. Winnebago Cnty. Dep’t of Soc. Servs.*, 489 U.S. 189, 196 (1989)).

government conduct puts an individual in peril due to a “deliberate indifference” to safety.¹⁷⁷ This indifference must be the product of a “culpable mental state more than gross negligence.”¹⁷⁸

The *Juliana* plaintiffs maintained that “with full appreciation of the consequences” the government defendants knowingly caused, and continue to cause, “dangerous interference with our atmosphere and the climate system.”¹⁷⁹ They cited the government’s “longstanding actual knowledge” of the serious risks of harm posed by its failure to confront climate change and alleged that the government had “a unique and central role” in creating the climate crisis “with full knowledge of the significant and unreasonable risks” involved.¹⁸⁰ Judge Aiken held that the youth plaintiffs stated a valid claim in their assertion that the government’s actions and inactions put the public “in peril in a deliberate indifference to their safety.”¹⁸¹ She agreed that if the plaintiffs could prove their allegations at trial—which she stated would require “rigorous proof”—due process would require government action to reduce emissions under the danger-creation exception.¹⁸²

V. The Public Trust Doctrine and the Atmosphere

¹⁷⁹ *Id.* at *17.

¹⁸⁰ *Id.*

¹⁸¹ *Id.* at 26 (quoting *Penilla v. City of Huntington Park*, 115 F.3d 707, 709 (9th Cir. 1997) and relying on *DeShaney v. Winnebago Cnty. Dep’t of Soc. Servs.*, 489 U.S. 196 (1989) (a state government agency’s failure to prevent child abuse by a custodial parent does not violate the child’s right to liberty for the purposes of the Fourteenth Amendment). . Judge Aiken emphasized that, at trial, the plaintiffs must show that “the government *knew* its acts caused that danger; and that . . . the government with *deliberate indifference* failed to act to prevent the alleged harm.” *Juliana*, at *16 (also noting, “These stringent standards are sufficient safeguards against the flood of litigation concerns raised by the [government]—indeed, they pose a significant challenge to plaintiffs in this very lawsuit.”).

¹⁸² *Id.* (“A plaintiff asserting a danger-creation due process claim must show: (1) the government’s acts created the danger to the plaintiff; (2) the government knew its acts caused the danger; and (3) the government *with deliberate indifference* failed to act to prevent the alleged harm.”). The court rejected the government’s claim that the danger-creation exception did not apply to the federal government. *Id.*

Some have accused the PTD of being irrelevant in a statutory era,¹⁸³ potentially undermining democracy and the separation of powers.¹⁸⁴ Government defendants characteristically describe the public trust principle as a mere common law doctrine limited to submerged lands, and applicable only to states.¹⁸⁵ None of those criticisms and perceived limitations are well-founded. In *Juliana*, Judge Aiken gave an accurate interpretation of the PTD’s origin, scope, and effect and contributed a trailblazing recognition that the PTD is implicit in constitutional due process, as explained below.

A. The PTD as Implicit in Sovereignty

A clarion aspect of *Juliana* was its recognition that the PTD is an inherent constitutional limit on sovereignty.¹⁸⁶ As Judge Aiken correctly noted, by limiting the ability of the legislature to dispose of essential natural resources, the principle protects the power of future legislatures to “provide for the well-being and survival of its citizens.”¹⁸⁷ Like the police power and the right of condemnation, the PTD is an inherent sovereign power—an “attribute of sovereignty”—recognized but not created by the Constitution.¹⁸⁸ As Aiken noted, the PTD is an ancient doctrine, originating in Roman law and finding its way to the United States through England.¹⁸⁹ The

¹⁸⁶ See, e.g., *Robinson Twp. v. Commonwealth*, 83 A.3d 901, 948–49 (Pa. 2013) (deciding that the PTD was a pre-existing right and was inherent in the state of Pennsylvania’s Constitution but not created by it).

¹⁸⁷ *Juliana*, at *18 (citing amicus brief of Global Catholic Climate Movement).

¹⁸⁸ The Tenth Amendment recognized state police powers, but it did not create them. U.S. CONST., § Amend. X (“The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.”). Likewise, the right to condemn private property was not created by the 5th Amendment, but merely subjected to “public use” and “just compensation” requirements. U.S. CONST., Amend. V (“... nor shall private property be taken for public use without payment of just compensation.”).

¹⁸⁹ *Juliana*, at *18 (“Application of the public trust doctrine to natural resources predates the United States of America. Its roots are in the Institutes of Justinian . . . the body of Roman law that is the ‘foundation for modern civil law systems.’”) (citation omitted). For background on the origins of the principle, see BLUMM & WOOD,

doctrine therefore applies equally to the federal as well as state governments, as discussed below.¹⁹⁰ Moreover, the PTD should raise no separation of power concerns because the courts merely pronounce the law and require the political branches to exercise their discretion within its bounds.¹⁹¹ The *Juliana* decision is certainly one in which the court aimed to invigorate, not intrude upon, the political branches of government.

In deciding that the PTD was an inherent aspect of sovereignty, Judge Aiken quoted Justice Kennedy's language in the Supreme Court's *Coeur d'Alene Tribe* decision,¹⁹² which declared that the PTD developed as "a natural outgrowth of the perceived public character of submerged lands, a perception which underlies and informs the principle that these lands are tied in a unique way to sovereignty."¹⁹³ As an inherent limit on sovereignty, the PTD applies to all sovereigns, not just the states.¹⁹⁴ This limit—preserved by but not created by the Constitution¹⁹⁵—is an "obligation

¹⁹⁵ *Juliana*, at *25.

[that] cannot be legislated away.”¹⁹⁶ Recognition of the inalienable nature of the PTD would prove dispositive as to the plaintiffs’ PTD claims in *Juliana*.

B. The Scope of the PTD and the Duty of Protection

Judge Aiken framed the scope of the PTD by noting that public trust assets were part of a “taxonomy of property” (dating back to early jurisprudence) that recognized the division of natural wealth into private and public property. Control over public trust property cannot be abdicated by the sovereign, as made clear in *Illinois Central* when the Supreme Court said the state legislature could not sell the shoreline of Lake Michigan to a private railroad company.¹⁹⁷ Judge Aiken broadly referred to the “natural resources trust,” noting “[i]n natural resources cases, the trust property consists of a set of resources important enough to the people to warrant public trust protection.”¹⁹⁸ Although she cited considerable authority for the proposition that air and the atmosphere falls within the scope of the public trust,¹⁹⁹ she found it unnecessary to decide the question,²⁰⁰ anchoring the plaintiff’s trust claims instead in the territorial seas. Observing that the

¹⁹⁹ *Id.* at *20, n. 10 (citing the Institutes of Justinian, J. Inst. 2.1.1 (J.B. Moyle trans.); *Arnold v. Mundy*, 6 N.J.L. 1, 71 (1821); *United States v. Causby*, 328 U.S. 256, 261 (1946); Mary C. Wood, *Atmospheric Trust Litigation Across the World*, in FIDUCIARY DUTY AND THE ATMOSPHERIC TRUST 113 (Ken Cargill et al. eds. 2012); *Mathews v. Bay Head Improvement Ass’n*, 471 A.2d 355, 365 (N.J. 1984) (concerning the capacity of the PTD to evolve to meet felt necessities); *Foster v. Wash. Dep’t of Ecology*, No. 14-2-25295-1 (Wash. Super. Ct. Nov. 19, 2015) (concerning the close relationship of navigable waters and the atmosphere); *Robinson Twp. v. Commonwealth*, 83 A.3d 901, 953 (Pa. 2013) (stating that the “ambient air” was a PTD resource because it was a “public natural resource” that implicated the public interest and was “outside the scope of purely private property”).

²⁰⁰ *Id.* at *20 (“I conclude that it is not necessary at this stage to determine whether the atmosphere is a public trust asset” but stating also, “To be clear, today’s opinion should not be taken to suggest that the atmosphere is not a public trust asset.”). The opinion, in note 10, built a robust case for treating air and atmosphere as public trust assets, referencing Justinian’s description of air as “by natural law common to all,” and citing cases that include air in the public trust. The court also noted the flexible interpretive approach that some courts bring to public trust cases.

federal government owns most of the submerged land in the territorial seas,²⁰¹ and recognizing the long-settled public trust over “lands beneath tidal waters,” Aiken found a viable PTD claim because a number of plaintiff’s injuries were caused by GHG pollution of the atmosphere that produced ocean acidification²⁰² and rising ocean temperatures.²⁰³

Juliana was not the only decision to interpret the scope of the PTD to reach the atmosphere because of its effects on navigable waters. In *Foster v. Wash. Dep’t of Ecology*, a Washington Superior Court—which stated that “[the youths’] very survival depends upon the will of their elders to act now, decisively and unequivocally, to stem the tide of global warming”—emphasized the inextricable relationship between navigable waters and the atmosphere, deciding that separating the two was “nonsensical.”²⁰⁴ The Alaska Supreme Court also suggested that the close relationship between the pollution of the atmosphere and the pollution of the oceans raised a PTD issue.²⁰⁵ Although there is growing precedent that the atmosphere is a PTD resource,²⁰⁶ even courts that do not expressly recognize it as a trust asset recognize a PTD claim when atmospheric pollution adversely affects traditional trust resources.

²⁰¹ The federal government owns the bed of submerged lands between three and twelve miles offshore. See *Juliana*, at *21 (citing Restatement (Third) of the Foreign Relations Law of the United States § 511(a) (1987); Presidential Proclamation of Dec. 21, 1988, No. 5928, 3 C.F.R. § 547 (1989); 43 U.S.C. § 1312).

²⁰² Ocean acidification is the ongoing increase in the acidity of the Earth's oceans, caused by the uptake of carbon dioxide from the atmosphere. See, e.g., K. Caldeira & M.E. Wickett, *Anthropogenic Carbon and Ocean pH*, 425 NATURE 365 (2003).

²⁰³ *Juliana*, at *21.

²⁰⁴ See Order Affirming the Dep’t of Ecology’s Denial of Pet. for Rule Making at 5, 8, *Foster v. Wash. Dep’t of Ecology*, No. 14-2-25295-1 SEA (Wash. Super. Ct. Nov. 19, 2015), <https://static1.squarespace.com/static/571d109b04426270152febe0/t/57607fe459827eb8741a852c/1465941993492/15.11.19.OrderFosterV.Ecology.pdf>. The court used the link between navigable waters and the atmosphere to announce that “the state has a constitutional obligation to protect the public’s interest in natural resources held in trust for the common benefit of the people of the State.” *Id.* at 8.

²⁰⁵ *Kanuk v. Alaska Dep’t of Natural Res.*, 335 P.3d 1088, 1102 (Alaska 2014) (recognizing that plaintiffs “do make a good case” when alleging that the atmosphere is inextricable linked to the entire ecosystem, and that climate change is already having impact on well-recognized public trust resources like water, shorelines, and wildlife, and noting also a potential trust violation where the atmospheric pollution adversely affects trust resources like navigable and tidal waters).

²⁰⁶ See *supra* note 199; *infra* notes 321-28 and accompanying text.

The *Juliana* court made clear the affirmative sovereign duty to protect assets in the trust inures “equally to both current and future beneficiaries of the trust.”²⁰⁷ Judge Aiken explained, “[i]n natural resources cases, the trust property consists of a set of resources important enough to the people to warrant public trust protection. . . . The government, as trustee, has a fiduciary duty to protect the trust assets from damage so that current and future trust beneficiaries will be able to enjoy the benefits of the trust.”²⁰⁸ Aiken ruled that this trust duty was non-discretionary: “no government can legitimately abdicate its core sovereign powers.”²⁰⁹ She announced that the youth plaintiffs had stated a valid PTD claim by asserting that the government “nominally retain[ed] control over trust assets while actually allowing their depletion and destruction” through marine acidification and rising sea levels and temperatures.²¹⁰ If proved at trial, neglect of the affirmative duty to protect would be a PTD violation, and therefore a constitutional violation as well, as explained below.²¹¹

C. The PTD as an Implicit Constitutional Right

Judge Aiken described the public trust, with its origins pre-dating the constitution, as part of the “inalienable [r]ights” that the people secured through the creation of government. Explaining the social contract theory that influenced the founding generation, the court observed that “the Declaration of Independence and the Constitution did not *create* the rights to life, liberty, or the pursuit of happiness—the documents are, instead, vehicles for protecting and promoting those already-existing rights.”²¹² One of the powers that government cannot bargain away, she

²⁰⁷ *Juliana*, at *19.

²⁰⁸ *Id.*

²⁰⁹ *Id.* at *18.

²¹⁰ *Id.* at *19.

²¹¹ For discussion of the upcoming trial, *see infra* section VI.

²¹² *Juliana*, at *25 (emphasis the court’s).

noted, is the “status of trustee pursuant to the public trust doctrine.”²¹³ This public right was neither waivable nor conveyable.²¹⁴ The court’s recognition of the public trust as protecting inalienable, inherent rights reserved by citizens in the original creation of government paralleled the approach forged in two important public trust decisions, both cited by the *Juliana* court: 1) in *Robinson Township v. Commonwealth*, a 2013 plurality opinion of the Pennsylvania Supreme Court written by Chief Justice Castille of the Pennsylvania Supreme Court that defined public trust rights as “inherent and inalienable” rights impliedly reserved by the citizens when forming government;²¹⁵ and 2) *Oposa v. Factoran*, a 1990 opinion from the Philippines Supreme Court, declaring that “these basic rights need not even be written in the Constitution for they are assumed to exist from the inception of humankind.”²¹⁶

Building on the inalienable rights frame that preceded the *Juliana* case, Judge Aiken broke new ground by deciding that the PTD—although antedating the Constitution—was secured by, and enforceable through, the due process clause of the Fifth Amendment of the Constitution,²¹⁷ which protects against the deprivation of life, liberty, and property from arbitrary federal or state governmental action.²¹⁸ Deciding that “public trust claims are properly categorized as substantive due process claims,” the court looked to the tests defining the scope of fundamental rights under

²¹³ *Id.*

²¹⁴ *Id.* (“Governments . . . possess certain powers that permit them to safeguard the rights of the people; these powers are inherent in the authority to govern and cannot be sold or bargained away. One example is the police power. Another is the status as trustee pursuant to the public trust doctrine.”)

²¹⁵ *Id.* (citing *Robinson Twp. v. Commonwealth*, 83 A.3d 901, 948 (Pa. 2013); *See also Robinson*, 83 A.3d at 947 (describing such rights as “of such ‘general, great and essential’ quality as to be ensconced as ‘inviolable.’”)).

²¹⁶ *Id.* (citing *Oposa v. Factoran*, No. 101083, 224 S.C.R.A 792, 33 I.L.M. at 188 (July 30, 1993)).

²¹⁷ *Juliana*, at *25.

²¹⁸ *See Juliana*, at * 5 (relying on U.S. CONST., Amend. V). The 14th amendment’s due process clause, directed at the states, would presumably produce a similar result if a state’s action threatened the youths’ right to a healthful atmosphere. *Id.* (Amend. XIV). Therefore, the *Juliana* opinion provides analysis useful to the state courts considering ATL claims. *See* section VII.A., explaining state ATL litigation. The *Juliana* court recognized the case as part of a “wave of wave of recent environmental cases asserting state and national governments have abdicated their responsibilities under the public trust doctrine. *Id.* at *29.

the due process clause: such rights must be “implicit in the concept of ordered liberty” or “deeply rooted in this Nation’s history and tradition.” The court concluded that “[p]ublic trust rights, related as they are to inherent aspects of sovereignty and the consent of the governed from which the United States’ authority derives, satisfy both tests.”²¹⁹ Thus, the right to a stable climate system, implicit in due process, is a constitutionally protected right, a consequence of the government’s ownership and control of trust resources like submerged lands and the oceans.²²⁰ Judge Aiken observed that since the PTD was not explicit in the due process clause, it fell within the scope of Ninth Amendment protection as well—although the Fifth Amendment provided the plaintiffs’ cause of action.²²¹

D. The Federal Public Trust Doctrine

Based on the reasoning that the public trust is an attribute of sovereignty, Judge Aiken concluded that the PTD burdened the federal government. In doing so, she disagreed with the D.C. Circuit, which ruled to the contrary in an unpublished and unreflective opinion rendered in an earlier federal ATL case, *Alec L. v. Jackson*.²²² As Judge Aiken stated, “I can think of no reason why the public trust doctrine, which came to this country through the Roman and English roots of our civil law system, would apply to the states but not to the federal government.”²²³ She found the D.C. Circuit’s reasoning unpersuasive—and for good reason, as that court seemed to over-read

²¹⁹ *Id.* at *25.

²²⁰ In this sense, the right to a stable climate system is similar to the public’s right to use the New Jersey and Oregon beaches, which are subject to public recreational use easements due to the public’s ownership of tidelands. *See* Raleigh Avenue Beach Ass’n v. Atlantis Beach Club, 879 A.2d 112 (N.J. 2005); State ex rel Thornton v. Hay, 462 P.3d 671 (Or. 1969). In both cases, the courts recognized ancillary public access rights necessary to protect the public’s use of publicly owned tidelands.

²²¹ *Juliana*, at *25, citing U.S. Const. Amend. IX (enumeration of rights express in the Constitution’s text “shall not be construed to deny or disparage other retained by the people.”).

²²³ *Juliana*, at *21.

Justice Kennedy’s statements about the PTD in a decision, *PPL Montana*, having nothing to do with the federal government.²²⁴

As Judge Aiken recognized, the *PPL Montana* case was not even about the PTD at all. Instead, it concerned the application of the equal footing doctrine to waterways in Montana. But in describing equal footing, Justice Kennedy distinguished it in passing from the PTD, referring to the latter as a state-law doctrine.²²⁵ Kennedy’s dictum was not exactly inaccurate, since the PTD has been largely interpreted by state courts. But the D.C. Circuit in *Alec L.* invoked the dictum in a context not remotely similar to the bedlands ownership question at issue in *PPL Montana*, stretching it beyond bounds to address the federal government’s obligations under the PTD. As Judge Aiken explained, the *Alec L.* court’s approach “was not a plausible interpretation” because “*PPL Montana* said nothing at all about the viability of federal public trust claims with respect to federally-owned trust assets.”²²⁶

Further, the *Alec L.* court’s reliance on *PPL Montana*, both unfounded and unsupported by any reasoning, was flatly inconsistent with the Supreme Court’s landmark PTD decision in *Illinois Central Railroad v. Illinois*.²²⁷ In *Illinois Central*, the Court recognized the PTD as an inherent limitation on the sovereignty of Illinois and decided that the state legislature could not convey and thereby privatize the inner-harbor of Chicago to a railroad company.²²⁸ *Illinois Central* is widely

²²⁴ *Id.* (describing the D.C. Circuit’s reliance on a “passing statement” of Justice Kennedy in *PPL Montana*, which Judge Aiken noted “was not a public trust case”); *id.* at *22. See *PPL Montana v. Montana*, 132 S.Ct. 1215 (2012) (ruling that the Montana Supreme Court failed to employ the proper federal test for navigable waters that were conveyed at statehood from the federal to the state governments under the equal footing doctrine, discussed in Blumm & Schaffer, *supra* note 190, at 407-09).

²²⁵ *PPL Montana*, 132 S.Ct. at 1235.

²²⁶ *Juliana*, at *22.

²²⁷ 14 U.S. 387 (1892).

²²⁹ *PPL Montana*, 132 S.Ct. at 1234-35.

²²⁸ *Illinois Central Railroad v. Illinois*, 146 U.S. 387, 452–53 (1892) (explaining that the conveyance from the state to the railroad “would sanction the abdication of the general control of the state over lands under the navigable

considered to be binding on the states (and therefore a reflection of federal law),²²⁹ foreclosing wholesale privatization of public resources.²³⁰ *Illinois Central* was *not* based on state law, despite erroneous dicta in some subsequent cases; it was instead a pronouncement of federal law.²³¹

Judge Aiken recognized that no Supreme Court decision had denied that there was a federal PTD, and in fact, well-reasoned lower court opinions recognized a federal PTD.²³² She explained that although the Court stated in its *Coeur d'Alene Tribe v. Idaho* decision that *Illinois Central* involved an interpretation of state law, that decision also recognized that the PTD's "central tenets . . . applied more broadly."²³³ Moreover, she pointed out that, despite the *PPL Montana v. Montana* Court's statement that "the public trust doctrine remains a matter of state law," that Court proceeded to describe how the American PTD diverged from the English PTD, leading Judge Aiken to write, "I can think of no reason why the public trust doctrine, which came to this country through the Roman and English roots of our civil law system, would apply to the states but not to

waters of an entire harbor or bay, or of a sea or a lake. Such abdication is not consistent with the exercise of that trust which requires the government of the state to preserve such waters for the use of the public. . . . The control of the state for the purposes of the trust can never be lost, except as to such parcels as are used in promoting the interest of the public therein, or can be disposed of without any substantial impairment of the public interest in the lands and waters remaining")

²²⁹ Most states have interpreted *Illinois Central* to be binding on them, belying the claim that the decision was a product of state law. See Crystal Chase, *The Illinois Central Public Trust Doctrine and Federal Common Law: An Unconventional View*, 16 HASTINGS W.-NW. J. ENVTL. L. & POL'Y L. REV. 113, 150-53 (2010) (of 35 state courts citing *Illinois Central*, 29 considered it to be binding).

²³⁰ *Illinois Central Railroad*, 146 U.S. at 453 ("A grant of all the lands under navigable waters has never been adjudged to be within the legislative power; and any attempted grant of the kind would be held, if not absolutely void on its face, as subject to revocation. The state can no more abdicate its control over property in which the whole people are interested, like navigable waters and the soils under them, so as to leave them under the use and control of private parties . . . than it can abdicate its police powers in the administration of government and the preservation of the peace.").

²³¹ The *Illinois Central* decision was, for example, later mischaracterized as a statement of Illinois Law in *Appleby v. City of New York*, 271 U.S. 364, 395 (1926). The erroneous statement was dictum, as fully explained in Chase, *supra* note 226, at 150-53.

²³² See *Juliana*, at *23 (citing *U.S. v. 1.58 Acres of Land Situated in the City of Boston, Suffolk Cnty., Mass.*, 523 F.Supp. 120, 124 (D. Mass. 1981); and *City of Alameda v. Todd Shipyards Corp.*, 635 F.Supp. 1447, 1450 (N.D. Cal. 1986)). See also Blumm & Schaffer, *supra* note 190, at 421-22 (citing cases).

²³³ See *Juliana*, at *22 (quoting from *Coeur d'Alene Tribe*, 521 U.S. at 285).

the federal government.”²³⁴ She decided that, because the PTD is an inherent attribute of sovereignty, the federal sovereign is just as subject to the PTD as are the state sovereigns.²³⁵

E. The PTD and Congressional Displacement

In *Juliana*, the government argued that the federal public trust claim was displaced by the Clean Air Act, relying on an earlier Supreme Court decision, *American Electric Power Company v. Connecticut*, which concluded that the Clean Air Act displaced a common law nuisance claim brought against coal-fired plants for greenhouse gas pollution.²³⁶ In an earlier federal ATL case, *Alec L.*, the government successfully convinced the D.C. federal district court the PTD was displaced by the Clean Air Act, under the *American Electric Power* holding.²³⁷ The *Alec L.* court, however, made no detailed inquiry into the differences between a common law nuisance claim against polluters that could be regulated under the CAA and a public trust claim brought by citizens against government actors who failed to fulfill their constitutional fiduciary duty to protect the trust resource.

In an extensive analysis, Judge Aiken contrasted the two types of claims and determined that the inalienable aspect of the PTD, established long ago in the Supreme Court’s *Illinois Central* decision, was decisive.²³⁸ She recognized that the PTD—as an inherent limit on sovereignty and implicit in the Constitution’s due process clause—imposed a non-displaceable obligation that distinguished it from a federal common law nuisance claim.²³⁹ Aiken stated: “Public trust claims

²³⁴ *Id.* (stating also, “[t]here is no reason why the central tenets of *Illinois Central* should apply to another state, but not to the federal government.”).

²³⁵ *Id.* at *23. Most states have interpreted *Illinois Central* to be binding on them, contradicting the claim that the decision was a product of state law. See Chase, *supra* note 229, at 150-53.

²³⁶ 564 U.S. 410, 424 (2011).

²³⁷ *Alec L. v. Jackson*, 863 F.Supp.2d 11, 16 (D.D.C. 2012) (quoting the *AEP* decision, 564 U.S. at 424, 428).

²³⁸ 146 U.S. at 453 (a state may not “abdicate its control over property in which the whole people are interested.”).

²³⁹ *Juliana*, at *24.

are unique because they concern inherent attributes of sovereignty. The public trust imposes on the government an obligation to protect the *res* of the trust. A defining feature of that obligation is that it cannot be legislated away. Because of the nature of public trust claims, a displacement analysis simply does not apply.”²⁴⁰

However prominent the displacement issue will be on appeal, if the Ninth Circuit understands the constitutional force of the public trust, the appeals court should categorically reject the displacement argument. As the *AEP* Court noted, displacement analysis applies to common law: “The test for whether congressional legislation excludes the declaration of federal common law is simply whether the statute ‘speak[s] directly to [the] question’ at issue.”²⁴¹ But the trust represents a constitutional measure of the sovereign’s performance. Thus, *the AEP* inquiry, which looks simply to what the statutes address, is not appropriate in a constitutional context. For even when a government enacts regulations to prevent harm to the assets held in trust, the basic trust question remains as to whether the regulation is adequate, as implemented, to protect the natural asset for present and future generations.²⁴²

F. The PTD and the Federal Property Clause

The *Juliana* decision rejected the government’s claim that a federal PTD was inconsistent with federal authority under the Constitution’s property clause.²⁴³ The Supreme Court has ruled numerous times that the scope of federal authority under that provision is “without limitations.”²⁴⁴

²⁴⁰ *Id.* at *24.

²⁴¹ *AEP v. Connecticut*, 564 U.S. 410, 424 (2011) (citation omitted).

²⁴² It is nearly inconceivable that pollution regulation alone under the CAA would suffice to meet the public trust obligation. A sovereign would have to implement other types of policy to make the transition from fossil fuels to renewable energy and to thereby achieve the decarbonization necessary to stabilize the atmosphere, much less achieve the carbon drawdown called for by scientists. See Hansen, *Climate Prescription*, *supra* note 59.

²⁴³ U.S. CONST., Art. IV, § 3, cl. 2 (“Congress shall have authority to establish all needful rules concerning”)

²⁴⁴ Judge Aiken cited *Kleppe v. New Mexico*, 426 U.S. 529, 539 (1976) (rejecting the state’s attempt to limit federal authority over wildlife on public lands). Decisions dating back to 1840 uphold federal authority over public lands

But Judge Aiken noted that the Court has qualified its broad pronouncement, stating that “the furthest reaches of the power granted by the Property Clause has not yet been definitively resolved[.]”²⁴⁵

Judge Aiken characterized the “defining feature” of the PTD as the duty to protect the corpus of the trust, a duty which “cannot be legislated away.”²⁴⁶ Thus, she concluded that the Court has never ruled that the federal government had authority under the property clause to “violate individual constitutional rights or run afoul of public trust obligations.”²⁴⁷ In other words, while the property clause may allow broad discretion for the sovereign trustee to choose between appropriate trust uses to benefit the public, it may not breach the trust by allowing wholesale impairment or destruction of the natural wealth, for that would contravene the very purpose of the trust to protect an ecological endowment for present and future generations of the nation. The property clause authority—while expansive—is thus subject to constitutional liberty rights, including the PTD.

VI. *Juliana* and the Road Ahead

Judge Aiken denied the federal government’s and industry intervenors’ motions to dismiss. In the next phase of the litigation, the plaintiffs must prove, after discovery, that their constitutional rights as articulated by Judge Aiken were in fact violated by the federal government’s past and ongoing actions and inactions. The discussion below provides a roadmap of the steps ahead.

and characterize the role of government in administering those lands as a public trustee. See Michael C. Blumm & Olivier Jamin, *The Property Clause and Its Discontents: Lessons From the Malheur Occupation*, 43 *ECOLOGY L.Q.* __ (forthcoming 2017). Decisions expressing broad, nearly unfettered federal power over public lands were typically in the context of challenges to the federal government’s authority to protect such lands. For analysis, see *WOOD, NATURE’S TRUST*, *supra* note 101, at 135.

²⁴⁵ *Juliana*, at *23 (quoting *Kleppe*, 426 U.S. at 539).

²⁴⁶ *Id.* at *24.

²⁴⁷ *Id.* at *23.

A. The Ongoing Case: “The Trial of the Millennium”

Judge Aiken’s November 2016 decision set the stage for a trial on the merits as to whether the federal government’s energy policies breached its constitutional duty to protect the due process, equal protection, and public trust rights of the plaintiff youth to a stable climate system. A trial presenting such broad evidence—geared towards proving violations of fundamental rights—is quite unusual in federal environmental law, which typically concerns judicial review of specific agency rules or enforcement actions under statutory authority. Environmental law is largely about administrative law.²⁴⁸ Environmental attorneys typically engage more in administrative and appellate practice rather than courtroom lawyering.²⁴⁹

The forthcoming stage of the *Juliana* case will—for the first time—put U.S. federal fossil-fuel policy on trial and subject it to broad public scrutiny, prompting the youths’ attorneys to call this the “trial of the millennium.”²⁵⁰ Fossil fuel policies have never been comprehensively assessed against climate reality by the judiciary. Although some congressional hearings and media investigative reports have focused on discrete aspects of government’s fossil fuel policy,²⁵¹ there has never been a forum evaluating how U.S. fossil-fuel policy in its totality measures up to the imperative of carbon dioxide reduction as illuminated by climate science. The *Juliana* case provides the first opportunity to do so in a court of law. Moreover, since *Juliana* was grounded

²⁴⁸ See WOOD, NATURE’S TRUST, *supra* note 101, ch. 11 (describing role of courts in environmental law).

²⁴⁹ One exception concerns alleged “take” of endangered species without authority granted by permits or take statements authorized by the Endangered Species Act (ESA). 16 U.S.C §1539. Proving an ESA “take” can require a fact-intensive trial.

²⁵⁰ See Coco McPherson, *Why Young Americans Are Suing Obama Over Climate Change*, ROLLING STONE (Mar. 12, 2016), <http://www.rollingstone.com/politics/news/why-young-americans-are-suing-obama-over-climate-change-20160312>.

²⁵¹ See WOOD, NATURE’S TRUST, *supra* note 101, ch. 1.

on the Constitution, Congress may not—as it has done in the past with disputes based on statutes—make the case disappear by dictating the result.²⁵²

During the forthcoming trial, federal lawyers may try to downplay climate dangers and obfuscate climate science. But, unlike political forums, a court offers a deliberative fact-finding forum subject to the rules of evidence, so strategies of “manufacturing doubt” (or facts) may be far less effective in the courtroom.²⁵³ Government evidence will not receive the kind of judicial deference that it enjoys in administrative law cases challenging rules that are subject to notice-and-comment rulemaking.²⁵⁴ Instead, the government must carry the same burden of persuasion imposed on all civil litigants.²⁵⁵

1. The Focus of *Juliana* Discovery

The discovery phase of trial is presently underway. The focus of discovery and trial in the *Juliana* case will mirror the elements of the plaintiffs’ claims. The public trust claim is rather straightforward, requiring evidence that the government, as trustee, allowed “substantial impairment” of crucial trust resources.²⁵⁶ A plethora of existing climate studies likely satisfy that basic threshold.²⁵⁷ Because the *Juliana* opinion focused on the ocean and shoreline environment as a trust resource, fact-finding will undoubtedly explore, at the least, the relationship between

²⁵² *Id.* at 106-07 (discussing appropriation riders waiving statutory obligations).

²⁵³ For a discussion of the fossil fuel industry’s campaign of “manufacturing doubt” within the political sphere, see NAOMI ORESKES & ERIK CONWAY, *MERCHANTS OF DOUBT* (Bloomsbury Press 2011).

²⁵⁴ See *Chevron U.S.A., Inc. v. Nat. Resources Def. Council*, 467 U.S. 837, 843–844 (1984).

²⁵⁵ That burden requires generally a preponderance of the evidence.

²⁵⁶ See *supra* note 233 and accompanying text. For “substantial impairment,” see *Juliana* Findings, *supra* note 104, at 1. See *Illinois Central*, 146 U.S. at 435 (explaining that the government can use or dispose of lands held in trust for the public “when that can be done without substantial impairment of [the public’s] interest.”).

²⁵⁷ See, e.g., *Juliana* Complaint, *supra* note 49, at 51-56; Hansen, *Climate Prescription*, *supra* note 59.

GHG emissions and ocean acidification, the effects of ocean acidification and rising temperatures on marine life, and the effect of rising global temperatures on sea levels.

The district court distilled the constitutional claims into whether the government’s fossil fuel policies violate the youth’s fundamental due process rights to life, liberty, and property.²⁵⁸ Plaintiffs will present evidence to show that government actors placed them (and their generation) in danger, or enhanced a position of danger, acting with “deliberate indifference to their safety.”²⁵⁹ As Judge Aiken wrote, “Deliberate indifference requires creation of a dangerous situation with actual knowledge or willful ignorance of impending harm.”²⁶⁰

The evidence on the constitutional claims will focus on 1) government’s knowledge of the climate danger, and 2) its response to and perpetuation of that danger by continuing to promote fossil fuels. As to the first, numerous public reports referenced in plaintiffs’ complaint and subsequent briefing show consistent warnings from climate scientists and agency staff to government leaders over the last several decades.²⁶¹ The climate-science inquiry is likely to explore the gravity and extent of risk to young people and future generations, the tipping points and climate thresholds, and projections for the future.

As to the second issue, there are a couple of aspects to the government’s fossil-fuel policy that will be addressed at trial, described by plaintiff’s counsel in oral argument as “two sides of a

²⁵⁸ See *supra* note 174 and accompanying text.

²⁵⁹ See *Juliana*, at *16.

²⁶⁰ *Id.* (“Plaintiffs’ allege that the defendants’ action in this case has created a life-threatening situation and that defendants have willfully ignored long-standing and overwhelming scientific evidence of that impending harm to the young and future generations.”)

²⁶¹ See *Juliana* Complaint, *supra* note 49, at 51-56; see *supra* note 56 and accompanying text.

coin:” 1) the regulation side, and 2) the production side.²⁶² The regulation side involves the failure to regulate CO₂ emissions (such as the government’s initial resistance to making an “endangerment” finding from CO₂ that would trigger Clean Air Act regulation²⁶³). The production side involves affirmative government steps to authorize and promote fossil fuel production and consumption. The complaint detailed a myriad actions taken over the decades “in the areas of fossil fuel extraction, production, transportation, importation and exportation, and consumption,” that cause dangerous cumulative atmospheric CO₂ concentrations, disrupting the climate system and threatening “irreversible harm to the natural systems critical to Plaintiffs’ rights to life, liberty, and property.”²⁶⁴

Days before President Obama left office, the federal defendants submitted an answer to the complaint – over a year after the case was filed.²⁶⁵ In it, they made several significant admissions that may make it difficult for the Trump Administration’s lawyers to contest many of the factual assertions in the complaint. The government acknowledged that the use of fossil fuels contributes CO₂ emissions, “placing our nation on an increasingly costly, insecure and environmentally dangerous path.”²⁶⁶ The government also admitted that, for over fifty years, some officials in the federal government were aware of the growing body of climate research showing the potential danger from rising CO₂ levels. Further, the government conceded that federal policies have

²⁶² Reporter’s Tr. Of Proceedings at 44-45, *Juliana v. U.S.*, No. 6:15-cv-01517-TC (Sept. 13, 2016), <https://static1.squarespace.com/static/571d109b04426270152febe0/t/57e4b56fe58c624b613c92da/1474606448428/09-13-2016+Aiken+civil+Juliana.pdf>.

²⁶³ *Massachusetts v. Environmental Protection Agency*, 549 U.S. 497, 510 (2007).

<https://static1.squarespace.com/static/571d109b04426270152febe0/t/587a5336f7e0ab6a701534f6/1484411703596/Doc+98+Feds+Answer.pdf>.

²⁶⁶ *Id.* The federal defendants’ answer to paragraph 150 of the *Juliana* Complaint stated: “Federal Defendants admit the allegations in this paragraph.” *Id.* (quote originates from the *Juliana* Complaint). See *Juliana* Complaint, *supra* note 49, at 60.

contributed to the present CO₂ levels, which “threaten the public health and welfare of current and future generations.”²⁶⁷ The Trump Administration lawyers could offer an amended answer disputing the climate science, but as Professor Michael Burger has observed, “[t]he last thing a Trump Administration department of justice actually wants is to have the science of climate change go on trial.”²⁶⁸

In addition to evidence supporting the substantive due process, equal protection, and public trust claims, the plaintiffs must present facts supporting standing, showing both causation between the government’s conduct and their injuries.²⁶⁹ The court noted that, although “[e]ach link in these causal chains may be difficult to prove,” that difficulty did not make the case non-justiciable at the pleading stage of the litigation.²⁷⁰ The plaintiffs must also demonstrate redressability, namely, a “substantial likelihood” that a court remedy would address their injuries.²⁷¹ The questions framed by the court include: 1) what part of the youth plaintiffs’ injuries are attributable to emissions beyond the government’s control?; 2) despite such emissions, would the plaintiffs’ injuries be reduced if they obtained judicial relief?; and 3) when will the world reach the climate-change tipping point of no return when irreversible consequences are inevitable, and could the defendants avoid that tipping point without cooperation from third parties?²⁷²

²⁶⁷ See Federal Defs.’ Answer, *supra* note 272; Megan Darby, *Obama Ties Trump Admin Into Accepting CO₂ Dangers*, CLIMATE CHANGE NEWS (Jan. 19, 2017, 4:04 PM), <http://www.climatechangenews.com/2017/01/19/obama-ties-trump-admin-into-accepting-co2-dangers/>; Emily Hoard, *Federal Defendants Admit to Several Allegations of Youth Climate Lawsuit*, THE NEWS-REVIEW (Jan. 19, 2017), http://www.nrtoday.com/news/environment/federal-defendants-admit-to-several-allegations-of-youth-climate-lawsuit/article_55fe66da-6d35-5394-9081-398d19cbf0ea.html.

²⁶⁸ See Darby, *supra* note 267 (quoting Burger).

²⁷⁰ See *Juliana*, at *13.

²⁷¹ *Id.* (also noting, “If plaintiffs can show, as they have alleged, that defendants have control over a quarter of the planet’s greenhouse gas emission, and that a reduction in those emissions would reduce atmospheric CO₂ and slow climate change, then plaintiffs’ requested relief would redress their injuries.”).

²⁷² *Id.* (citing an affidavit of Dr. James Hansen, concerning the irreversible tipping point).

2. The Industry on Trial

Although the federal government's answer to the plaintiffs' complaint contained potentially significant admissions, certain aspects of the climate science and government response to climate change will proceed to trial. A judicially-supervised fact-finding process could have important ramifications outside of the case (discussed in section B below). The discovery process in *Juliana* may prove intriguing because of the status of the fossil-fuel industry as an intervenor-defendant party. This intervenor status makes the industry subject to discovery requests²⁷³ and creates the potential for plaintiff attorneys to explore the longstanding, but largely surreptitious, relationship between the government and the fossil-fuel industry. In fact, just after a pre-trial conference with Magistrate Thomas Coffin, the plaintiffs' attorneys gave notice of a deposition for Rex Tillerson, the former CEO of Exxon who is now Secretary of State.²⁷⁴ Tillerson also was president of the board of directors of the American Petroleum Institute, the main intervenor in the *Juliana* case. His appointment as Secretary of State carries the highly unusual consequence of a lead intervenor figure becoming a lead government agency defendant.²⁷⁵ Julia Olson, a plaintiffs' attorney, claimed that the Tillerson's appointment "very clearly demonstrates . . . that the United States government and the fossil fuel industry have worked together to keep a fossil-fuel-based energy system in place, and that has caused climate change and has threatened the lives of these plaintiffs and future generations and resulted in constitutional violations."²⁷⁶

²⁷³ See FRCP 16, 26(b) (2015) (under the federal rules of civil procedure, an intervenor becomes a party to the case, and thus becomes subject to rule 16 governing discovery among parties).

²⁷⁴ See Pls.' Notice of Dep. of Rex Tillerson, No. 6:15-cv-01517-TC (D. Or. Dec. 28, 2016), <https://static1.squarespace.com/static/571d109b04426270152febe0/t/58645e359f74562190fa14f2/1482972726374/2016-12-28+Notice+of+Depo+Tillerson.pdf> (requesting testimony of Rex Tillerson, Secretary of State-designate and former CEO of ExxonMobil).

²⁷⁵ The Department of State is one of the defendant agencies in the *Juliana* case.

²⁷⁶ See Dana Varinsky, *Trump's Secretary of State Nominee May Have to Testify in a Landmark Climate Lawsuit the Day Before Inauguration*, BUSINESS INSIDER (Jan. 13, 2017, 11:15 AM), <http://www.businessinsider.com/tillerson-kids-climate-lawsuit-deposition-2017-1>.

One aspect of the fact-finding will concern the relationship between the industry and government officials, and whether those officials and their agencies gave preference to the industry's goal of fossil-fuel promotion instead of the public they are constitutionally bound to represent. The answer to that question could have enormous implications not only as evidence for other the constitutional claim—perhaps by explaining the intent of government officials who pursued what they knew was a dangerous energy policy—but it also may enhance the public trust claim. Any trust requires a fiduciary trustee to exercise a duty of loyalty towards the beneficiaries, which, in the case of a public trust, are the present and future citizens.²⁷⁷ The trust requires avoidance of any conflict of interest—indeed, in Justice Cardozo's famous words, “a punctilio of an honor the most sensitive.”²⁷⁸

Policies favoring the industry to the detriment of the citizen beneficiaries would not omen well for the government defendants. Although breach of the duty of loyalty is not a necessary element of plaintiff's public trust claim,²⁷⁹ a breach would fall within the complaint's allegation that “Defendants have failed in their duty of care to safeguard the interests of Plaintiffs as the present and future beneficiaries of the public trust.”²⁸⁰ The broad sweep of that claim appears to warrant a probing inquiry as to whether industry influence over government decision makers

²⁷⁷ See *Robinson Twp. v. Commonwealth*, 83 A.3d 901, 957-60 (Pa. 2013).

²⁷⁸ See *Meinhard v. Salmon*, 164 N.E. 545, 546 (N.Y. 1928).

²⁷⁹ The public trust principle gives rise to both substantive and procedural fiduciary duties. See *The Public Trust Doctrine, a Primer*, UNIVERSITY OF OREGON ENVIRONMENTAL AND NATURAL RESOURCES LAW CENTER, https://law.uoregon.edu/images/uploads/entries/PTD_primer_7-27-15_EK_revision.pdf; Mary Christina Wood & Gordon Levitt, *The Public Trust Doctrine in Environmental Decision Making*, chapter in ENVIRONMENTAL DECISION MAKING (Edward Elgar Publishing 2015), pre-publication draft available at https://law.uoregon.edu/images/uploads/entries/FINAL_PDF_For_DISTRIBUTION_Encyclopedia_Public_Trust1.pdf. Plaintiffs' substantive public trust claim rests on the government's fiduciary duty to protect and restore the atmosphere. This claim does not entail any element of willfulness or intent or bias. Rather, it rests on the evidence that the atmosphere has been “substantially impaired” partially as a result of government's actions in promoting fossil fuel production. But the complaint was crafted in a broad enough manner to allow evidence of a violation of the trustees' procedural duty of loyalty to citizens. Such duty requires avoidance of any conflicts that could create bias in decision-making.

²⁸⁰ See *Juliana Complaint*, *supra* note 49, at 98.

tainted the decision-making process. Thus, the relationship between the fossil fuel industry and government may be subject to discovery, making the industry vulnerable in a number of ways discussed below.

B. Ripple Effects Across the Legal and Social Landscape

Although there will likely be an appellate stage to the *Juliana* litigation in the Ninth Circuit, and perhaps the U.S. Supreme Court, the more immediate discovery and fact-finding stage of the case at trial could have dramatic ramifications within and outside the legal field. Within the legal field, the climate science fact-finding in particular may influence other ATL cases in other jurisdictions, both in the United States and abroad. Because *Juliana* is part of a coordinated litigation campaign, with a number of cases pending throughout the nation and the world, as discussed below,²⁸¹ facts established at trial and reflected in a *Juliana* opinion could influence other ATL courts.

The case could have far-reaching effects on other non-ATL litigation as well. Potential evidence indicating that fossil fuel companies knew of the mounting climate danger and continued their operations despite this knowledge—and in fact tried to obfuscate the climate danger in various forums—could affect pending investigations launched by state attorney generals in New York and California that probe potential violations of securities laws, and a pending case brought by the Massachusetts Attorney General against Exxon Corporation alleging violations of state consumer protection laws (concerning the industry’s alleged failure to disclose relevant information on the effect its products would have on the planet’s climate system).²⁸² Possible

²⁸¹ See *infra* section VII.

²⁸² For discussion of the Massachusetts litigation, see Marilyn Schairer, *Mass Scored A Victory in its Exxon Lawsuit: What’s Next*, WGBH NEWS, (Jan. 18, 2017), <http://news.wgbh.org/2017/01/18/local-news/mass-scored-victory-its-exxon-lawsuit-whats-next>.

evidence of fossil fuel industry collusion with the government could spur new criminal investigations on the state level, or even at the federal level, and perhaps in other nations as well. As Denis Binder has explained, “criminal liability has become a global reality. . . .” particularly in response to disasters such as oil spills and explosions and other pollution disasters.²⁸³

Moreover, evidence of an industry-government alliance could advance the necessity defense raised by citizens arrested for non-violent civil disobedience in the form of direct action to stop the flow of oil. For example, five citizens known as the “Valve Turners” face prosecution in four different states for shutting off pipelines carrying tar sand oil from Canada in to the U.S.²⁸⁴ The necessity defense requires a showing that the defendants lacked recourse to stop the climate harm using traditional legal avenues²⁸⁵—a showing that would be advanced through any evidence of government-industry collusion. In the so-called *Delta Five* case, an amicus party, the Climate Defense Project, submitted a brief in support of the necessity defense and argued that the citizens’ civil disobedience was a necessary response to the state of Washington’s alleged violation of its constitutional public trust duty to protect the atmosphere and a healthy climate system.²⁸⁶

Beyond its legal ramifications, the *Juliana* case could spur greater and more widespread climate awareness among the public. At a time when the Trump Administration promotes climate

²⁸³ See Denis Binder, *The Increasing Application of Criminal Law in Disasters and Tragedies: A Global Phenomenon*, 38 W. NEW ENG. L. REV. 313, 313 (2016), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2647610.

²⁸⁴ See *Washington State Jury Refuses to Convict First “Valve-Turner” in Four State Tar Sands Pipeline Action*, FREE SPEECH RADIO NEWS (Feb. 3, 2017), <https://fsrn.org/2017/02/washington-state-jury-refuses-to-convict-first-valve-turner-in-four-state-tar-sands-pipeline-action/>.

²⁸⁵ See *U.S. v. Meraz-Valeta*, 26 F.3d 992, 995 (10th Cir. 2004), *rev’d on other grounds by U.S. v. Aguirre-Tello*, 353 F.3d 1199, 1207-08 (10th Cir. 2004).

²⁸⁶ Amicus Br. of Climate Defense Project in Supp. of Defs.’ Mot. for Discretionary Review, *Washington v. Brockway* (Wash. Ct. App. Feb. 23, 2017), <https://climatedefenseproject.org/wp-content/uploads/2017/02/CDP-Amicus-Brief-State-v.-Brockway.pdf>.

denialism,²⁸⁷ the case has galvanized national and international press attention, and the trial is likely to be widely covered by the press. If the plaintiffs present evidence of collusion between the fossil fuel industry and government in the face of knowledge of mounting danger to children, the court of public opinion could react in a way that deters fossil fuel investors, increases the hostility of consumers to energy companies, and inspires widespread resistance to fossil fuel development worldwide. As columnist Dan Kahle wrote about the case, “When the future speaks for itself, we can’t bear not to listen.”²⁸⁸

C. The Remedy

In their complaint, *the Juliana* plaintiffs asked for a plan to 1) decarbonize the United States infrastructure at a rate that meets the pace set by the best available science, as currently captured in the Hansen prescription (described in section I); and 2) a plan to achieve drawdown of atmospheric carbon. These measures are necessary to restore the planet’s CO₂ levels to below 350 parts per million. The remedy is characteristic of “structural injunctions” that have been ordered by other courts in various instances of institutional malfeasance or recalcitrance. Structural remedies require an enforceable, judicially supervised plan at their core.

Even as discovery and trial proceed, the Trump Administration is likely to approve extraction and development of U.S. fossil fuels as rapidly as possible. For example, on February 7, 2017, the U.S. Army Corps of Engineers abruptly terminated the environmental review process for the controversial Dakota Access Pipeline and granted the easement, moving rapidly towards

²⁸⁷ On March 9, 2017, EPA head Scott Pruitt questioned the human role in climate change, sparking widespread citizen criticism. See *EPA’s Scott Pruitt Denies Climate Change Science and Angry Americans are Flooding Him with Phone Calls*, CHICAGO TRIBUNE (Mar. 10, 2017) <http://www.chicagotribune.com/news/nationworld/politics/ct-scott-pruitt-climate-change20170310-story.html>.

²⁸⁸ See Dan Kahle, *Youth’s Climate Lawsuit Could Have Lasting Impact*, THE REGISTER-GUARD (Jan. 20, 2017), <http://registerguard.com/rg/opinion/35194101-78/youths-climate-lawsuit-could-have-lasting-impact.html.csp>.

completion of the pipeline and the flow of oil.²⁸⁹ Since analysts project that continued production from just currently operating oil and gas fields around the world will push the planet to 1.5 degrees C. over preindustrial temperatures²⁹⁰—beyond the aspirational limit set by the global Paris Agreement on climate change²⁹¹—there appears to be a need for so-called “backstop injunctions” to protect the status quo for the duration of the lawsuit. Such an injunction could restrict fossil fuel development in new areas or limit the expansion of existing projects.²⁹² A court’s role in this regard might be similar to the role of district courts responding to the Trump immigration order, which was challenged as unconstitutional.²⁹³ In *Darweesh v. Trump*, for example, the federal district court for the Eastern District of New York issued a nationwide injunction against enforcement of the Trump order only days after its issuance.²⁹⁴

Clearly, the *Juliana* case clearly has enormous freight to carry. But given the Trump Administration’s declared intentions to ramp up fossil-fuel production and consumption,²⁹⁵ there

²⁸⁹ Army Corps of Engineers Grants Easement for Dakota Access Pipeline, NPR (Feb. 7 2017), <http://www.npr.org/2017/02/07/513957885/army-corps-of-engineers-grants-easement-for-dakota-access-pipeline>

²⁹⁰ See Greg Muttitt, *The Sky’s Limit: Why the Paris Climate Goals Require A Managed Decline of Fossil Fuel Production*, OIL CHANGE INTERNATIONAL (2016), http://priceofoil.org/content/uploads/2016/09/OCI_the_skys_limit_2016_FINAL_2.pdf.

²⁹¹ See *supra* note 55 and accompanying text.

²⁹² After President Trump was elected but before he took office, President Obama had a unique opportunity to solidify some of his late-term actions disapproving fossil fuel production by entering into a partial consent decree in the *Juliana* case. See Wood, Blumm, & Woodward, *supra* note 25. Despite persistent requests to do so by youth plaintiffs, the Obama Justice Department refused to pursue settlement options. See Alliance for Climate Education/Our Children’s Trust, *President Obama: Our Future Is On the Line*, WASH. POST (Dec. 2, 2016, 12:00 PM), https://www.washingtonpost.com/video/national/president-obama-our-future-is-on-the-line/2016/12/02/8765535e-b8b1-11e6-939c-91749443c5e5_video.html. The lack of transparency shrouding the Justice Department makes it difficult to know whether the highest officials in the Obama administration were ever even appraised of the opportunity to enter into a partial consent decree, or whether Justice attorneys were acting on their own without direction from the Obama White House – a problematic possibility. The attorney ethics surrounding Department of Justice decisions on settlement opportunities are worthy of examination but are beyond the scope of this article.

²⁹³ See *supra* notes 135-36 and accompanying text.

²⁹⁴ See Michael D. Shear, Nicholas Kulish, & Alan Feuer, *Judge Blocks Trump Order on Refugees Amid Chaos and Outcry Worldwide*, N.Y. TIMES (Jan. 28, 2017), <https://www.nytimes.com/2017/01/28/us/refugees-detained-at-us-airports-prompting-legal-challenges-to-trumps-immigration-order.html>.

²⁹⁵ See *supra* notes 6-11 and accompanying text.

appears to be little in the way of viable alternatives. Section VII below positions the case in the atmospheric trust litigation campaign advancing steadily in the United States and abroad.

VII. Atmospheric Trust and PTD Litigation Worldwide

Juliana was part of a series of cases filed by youth plaintiffs worldwide against governments, collectively referred to as atmospheric trust litigation (ATL).²⁹⁶ ATL cases seek to apply the fundamental public trust duty of protection to the atmosphere to abate continued damage from GHG pollution and restore climate balance.²⁹⁷ This section first considers the state litigation. The second section considers some of the cases abroad.

A. State Atmospheric Trust Litigation

ATL cases must progress through three stages to prove effective. First, the court must recognize its role in upholding the rights of the plaintiffs and rule against the government's procedural defenses designed to keep the case out of court—defenses such as standing, political question, and displacement. Second, the court must issue declarations of principle providing a guide for government action and a framework for the remedy. Third, the court must manage the remedy so that it offers a practical means to enforce the rights of the plaintiffs. Although the decisions in the state ATL cases are not binding on other states, they can influence each other as they move through the courts.

²⁹⁶ See Mary Christina Wood & Dan Galpern, *Atmospheric Recovery Litigation: Making the Fossil Fuel Industry Pay to Restore a Viable Climate System*, 45 ENVTL. L. 259 (2015) (outlining the atmospheric trust litigation campaign); see also WOOD, NATURE'S TRUST, *supra* note 100.

²⁹⁷ See WOOD, NATURE'S TRUST, *supra* note 100, at 220-29.

1. Overcoming Judicial Inertia

Public trust cases call forth the judiciary to evaluate the other branches of government in performance of fiduciary obligations owed to the people. As the Hawaii Supreme Court stated in a leading public trust case, “The check and balance of judicial review provides a level of protection against improvident dissipation of an irreplaceable *res*.”²⁹⁸ In the context of the ATL campaign, the early cases demonstrated that some courts were uncomfortable with a role in climate crisis, particularly in light of the complex regulatory schemes available to the agencies to regulate greenhouse gas pollution. As a result, several earlier decisions were dismissed on displacement, preemption, or political question grounds.²⁹⁹ As the court in *Alec L.* claimed, agencies are allegedly “better equipped” than courts to handle GHG pollution.³⁰⁰

These early decisions placed unwarranted confidence in the political branches of government to prevent runaway planetary heating.³⁰¹ Perhaps spurred by growing evidence of the severity of the climate crisis and the government’s clear lack of appropriate response, courts have begun to discard the displacement, preemption, and political question arguments. In *Kanuk v.*

²⁹⁸ *In re Water Use Permit Applications*, 9 P.3d 409, 455 (Haw. 2000). *See also* *Lake Mich. Fed’n v. U.S. Army Corps of Eng’rs*, 742 F. Supp. 441, 446 (N.D. Ill. 1990) (“The very purpose of the public trust doctrine is to police the legislature’s disposition of public lands. If courts were to rubber stamp legislative decisions, as Loyola advocates, the doctrine would have no teeth.”); *Ariz. Ctr. for Law in the Pub. Interest v. Hassell*, 837 P.2d 158, 169 (Ariz. Ct. App. 1991) (“Just as private trustees are judicially accountable to their beneficiaries for dispositions of the *res*, so the legislative and executive branches are judicially accountable for their dispositions of the public trust.”).

²⁹⁹ *See, e.g., Alec L. v. Jackson*, 863 F. Supp. 2d 11, 17 (D. D.C. 2012) (dismissing ATL federal suit on basis of displacement by Clean Air Act and noting that agencies are “better equipped” than courts to address carbon emissions); *Chernaik v. Kitzhaber*, 328 P.3d 799 (Or. Ct. App. 2014) (reversing lower court’s dismissal that had been based on political question doctrine, separation of powers doctrine, sovereign immunity, and the court’s perceived lack of authority to grant requested relief.).

³⁰⁰ *See Alec L.*, 863 F.Supp.2d at 17; *see also Chernaik et al. v. Brown*, No. 16-11-09273, slip op. at 15,16 (Or. Cir. Ct. May 11, 2015), <https://static1.squarespace.com/static/571d109b04426270152febe0/t/5760c5061d07c0ae9834fa84/1465959686687/15.05.11.OregonCircuitCtOpinion.pdf> (stating that the climate recovery plan sought by plaintiffs would ask the “Court to substitute its judgment for that of the legislature.”). The case is on appeal to the Oregon Court of Appeals.

³⁰¹ For discussion of judicial avoidance in the environmental context, see LISA KLOPPENBERG, *PLAYING IT SAFE: HOW THE SUPREME COURT SIDESTEPS HARD CASES AND STUNTS THE DEVELOPMENT OF LAW* 39–43, 46, 66 (N.Y.U. Press 2001).

Alaska, for example, the Alaska Supreme Court decided that the political question did not foreclose plaintiff's suit, although it rejected the particular declaratory relief sought by the plaintiffs, finding that it would not be dispositive.³⁰² In Oregon, the trial judge dismissed the plaintiffs' suit because the court thought the question was more appropriate for the legislative branches,³⁰³ but that decision was reversed by the Oregon Court of Appeals, which held "plaintiffs are entitled to a judicial declaration of whether, as they allege, the atmosphere 'is a trust resource' that 'the State of Oregon, as a trustee, has a fiduciary obligation to protect [from] the impact of climate change' . . ."³⁰⁴ In a summary of ATL cases, Professor Abate concluded that "several state courts have embraced the concept of ATL as a potential strategy to address climate change regulation in the courts, and it is rapidly gaining support."³⁰⁵

2. Judicial Recognition of ATL's Foundational Legal Principles

Beyond recognizing a role for the judiciary, the courts must declare rights to climate stability and underscore the constitutional nature of those rights. Even early cases made considerable headway on both scores. For instance, in 2012, *Bosner-Lain v. Texas*, the court upheld the Texas Commission on Environmental Quality's denial of the plaintiffs' rulemaking petition, but not without addressing several of the agency's incorrect assumptions about the case.³⁰⁶

³⁰² *Kanuk v. Alaska*, 335 P.3d 1088, 1102 (Alaska 2014).

³⁰³ Ignoring the purpose of the trust claim to hold the legislature accountable, the court stated, "One of the functions of the legislature is to decide politically, based on whatever facts it deems relevant to the determination, whether or not global warming is a problem and what, if anything, ought to be done about it." *Cherniak v. Kitzhaber*, (Or. Cir. Ct. Apr. 5, 2012), https://static1.squarespace.com/static/571d109b04426270152febe0/t/5760c9f801dbae197362236c/1465960952875/Oregon.Dist.Ct.Dismissal.Order_.pdf

³⁰⁴ *Cherniak v. Kitzhaber*, 263 Or App 463 (2014).

³⁰⁵ *See Abate, supra* note 89, at 557.

³⁰⁶ *Bosner-Lain v. Texas Comm'n on Envtl. Quality*, No. D-1-GN-11-002194 (Tex. Dist. Ct. July 9, 2012), https://static1.squarespace.com/static/571d109b04426270152febe0/t/57681f6de4fcb5dd5cbcb4f6/1466441581871/Texas-letter-ruling_0.pdf. The Texas Court of Appeals would later hold that the Texas Legislature had not given Texas courts jurisdiction over cases involving agencies' decisions regarding rule making petitions, invalidating the district court decision without addressing the court's findings on the public trust doctrine. *See Texas, OUR CHILDREN'S TRUST* (July 23, 2014), <https://www.ourchildrenstrust.org/texas>.

The court explicitly discarded the agency’s determination that the PTD applied only to water, stating “the [public trust] doctrine includes all natural resources of the State,” and the federal Clean Air Act provided “a floor, not a ceiling, for the protection of air quality.”³⁰⁷ In a 2015 case, the New Mexico Court of Appeals determined that the atmosphere was a trust asset; however, the court upheld dismissal of the case on grounds that statutes provided the appropriate framework of relief.³⁰⁸ In *Butler ex rel. Peshlakai v. Brewer*, the Arizona Court of Appeals stated: “[W]e assume without deciding that the atmosphere is a part of the public trust subject to the doctrine.”³⁰⁹ In Oregon, a lower court rejected air as part of the public trust, but the decision was roundly criticized by amicus law professors and is now on appeal.³¹⁰ In *Kanuk v. Alaska*, the Alaska Supreme Court stated that plaintiffs made a “good case” that the atmosphere is a public trust asset, but the court declined to issue declaratory relief to that effect, for prudential reasons.³¹¹ The Alaska court noted, that, even absent a declaration that air is a public trust asset, the trust could include climate change because of its “detrimental impact on already-recognized public trust resources such as water, shorelines, wildlife, and fish.”³¹²

In Washington’s ATL case, *Foster v. Department of Ecology*, the court resoundingly found that public trust includes air and atmosphere. Judge Hill stated: “The navigable waters and the atmosphere are intertwined and to argue a separation of the two, or to argue that GHG emissions

³⁰⁷ *Id.* at 1-2.

³⁰⁸ See *Sanders-Reed v. Martinez*, 350 P.3d 1221 (N.M. Ct. App. 2015) (“[H]olding that state constitution recognizes public trust over atmosphere but also finding that citizens’ claims for protection of the atmosphere must be based on existing constitutional or statutory processes.”).

³⁰⁹ *Butler ex rel. Peshlakai v. Brewer*, 2013 WL 1091209, *6 (Ariz. Ct. App. Mar. 14, 2013) (dismissal affirmed for lack of remedy).

May 11, 2015), <https://static1.squarespace.com/static/571d109b04426270152febe0/t/5760c5061d07c0ae9834fa84/1465959686687/15.05.11.OregonCircuitCtOpinion.pdf>; see also *Oregon*, OUR CHILDREN’S TRUST (last visited Mar. 9, 2017), <https://www.ourchildrenstrust.org/oregon>.

³¹¹ *Kanuk v. State*, Dep’t of Natural Res., 335 P.3d 1088 (Alaska 2014).

³¹² *Id.*

do not affect navigable waters is nonsensical.”³¹³ The court also decided that the public trust held constitutional force, both as a reserved right and as a right corollary to the state’s ownership of submerged lands under the equal footing doctrine. The court declared, “the State has a constitutional obligation to protect the public’s interest in natural resources held in trust for the common benefit of the people of the State If ever there were a time to recognize through action this right to preservation of a healthful and pleasant atmosphere, the time is now.”³¹⁴

3. Judicial Management of the Remedy

When courts turn to managing the remedy in stage three of ATL cases, their role is no different than in other public trust cases: courts do not exercise direct management over the trust *res* but instead aim to ensure that the political branches fulfill their trust obligation to avoid destruction or substantial impairment of the *res*. A critical difference arises, however, with respect to the urgency with which government must undertake remedial measures. In a tipping-point world, effective relief depends on close judicial supervision to ensure the implementation of effective climate recovery plans within applicable time frames. The past approach of deferring to the agencies no will longer suffice in face of an unforgiving climate reality, coupled with demonstrated agency recalcitrance to take action. Close supervision by the courts involves two tasks: 1) requiring a plan that includes measurable steps, and 2) imposing continued oversight to

³¹³ See Order Affirming the Dep’t of Ecology’s Denial of Pet. for Rule Making at 8, *Foster v. Wash. Dep’t of Ecology*, No. 14-2-25295-1 SEA (Wash. Super. Ct. Nov. 19, 2015).

³¹⁴ *Id.*, at 8–9. See Wood & Woodward, *supra* note 93 (discussing constitutional grounds of ruling). Framing the right to a healthy atmosphere as a constitutional right, the Washington court underscored the urgency of climate crisis by citing a December 2014 Washington Department of Ecology report that stated: “Climate change is not a far off risk. It is happening now globally and the impacts are worse than previously predicted, and are forecast to worsen If we delay action by even a few years, the rate of reduction needed to stabilize the global climate would be beyond anything achieved historically.” *Id.* at 9 (quoting WASH. DEP’T OF ECOLOGY, WASHINGTON GREENHOUSE GAS EMISSION REDUCTION LIMITS (2014)). The court recognized that the climate protection duty is also grounded in the Clean Air Act. See *id.* at 6 (“This mandatory duty must be understood in the context not just of the Clean Air Act itself but in recognition of the Washington State Constitution and the Public Trust Doctrine.”).

ensure proper execution. Judicial oversight of remedies was characteristic of desegregation, treaty rights, land use, prison reform, and educational funding cases.³¹⁵

Because most states already have some air regulation, and many have climate goals, the problem faced by some ATL courts is not the wholesale lack of agency authority to address climate goals, but instead a lack of effective action to match the scale of what scientists now say is needed to avert irrevocable harm. In some states, the mere existence of a statutory or regulatory scheme for GHG reduction masks serious neglect by the state agencies to implement the charge—not unlike the federal government’s longstanding failure to undertake comprehensive GHG regulation under the Clean Air Act.³¹⁶ In Oregon, for example, statewide climate targets were set in 2007, but they were non-binding, never implemented, and are now outdated.³¹⁷

To provide an effective remedy, a court must sometimes undertake the challenging task of comparing the regulatory progress underway with the progress needed as called for by expert testimony (or, as in the case of Washington, as informed by reports issued by the same agency that the youth have sued). Typically, government defendants allege that their regulatory processes will address the problem, and early ATL courts deferred to those branches, even though the plaintiffs alleged that the climate response by those branches was breathtakingly insufficient. The Massachusetts and Washington ATL actions, however, serve as path-breaking examples of courts addressing deficiencies of regulatory action, with the Washington case even taking notice of the

³¹⁵ See WOOD, NATURE’S TRUST, *supra* note 101, ch. 11 (describing remedial structures judges use to enforce fundamental rights in contexts of longstanding institutional recalcitrance or dysfunction)

³¹⁶ For the saga of failure to regulate under the Clean Air Act, see WOOD, NATURE’S TRUST, *supra* note 101, ch. 1.

³¹⁷ See Plaintiffs’ Opening Brief at 11-12, *Cherniak v. Oregon* (filed Feb. 25, 2016, Or. Ct. App.) (citing findings of Global Warming Commission that “Oregon is likely to fall well short of the targets set by its greenhouse gas reduction and mitigation plan.”).

contemporaneous *Juliana* decision.³¹⁸ (Notably, too, a court in the Netherlands has found government action deficient in comparison to the action scientists emphasize is necessary, as explained below in section VII.B.).

a. ATL in Massachusetts: Kain v. Department of Environmental Protection

The Massachusetts ATL case started as a petition for rulemaking to the state's environmental agency in 2012, requesting the state agency to prepare a plan to reduce carbon emissions, as required by the Massachusetts' Global Warming Solutions Act.³¹⁹ In a dystopian coincidence, the youth petitioners were delayed in filing the petition by one of the largest storms ever to hit the East Coast, Hurricane Sandy.³²⁰ Although the Department of Environmental Protection (DEP) denied the petition in June 2013, citing ongoing and upcoming efforts to address carbon emissions, the DEP's decision agreed with the petitioners that it was the state's responsibility "to protect the integrity of Massachusetts' atmospheric resource, climate system, and shorelines by adequately protecting our atmosphere."³²¹ However, the DEP's decision also

maintained that state positive law supplanted the state’s public trust doctrine.³²² In response, the petitioners filed an appeal with the district court.³²³

The district court affirmed DEP’s denial in 2015, and the youth plaintiffs appealed.³²⁴ Just six months later, the Massachusetts Supreme Judicial Court decided to take the case on direct review, skipping the lower appellate court.³²⁵ In May 2016, the Massachusetts court handed a resounding victory to the youth, deciding that the DEP failed to satisfy its legal obligation to reduce the state’s GHG emissions pursuant to legislative goals.³²⁶ The state’s existing schemes, it determined, “fall short.”³²⁷ The court ordered the agency to “promulgate regulations that address multiple sources or categories of sources of greenhouse gas emissions, impose a limit on emissions that may be released . . . and set limits that decline on an annual basis.”³²⁸

The Massachusetts high court did not order the lower court to retain jurisdiction over the remedy, but the decision prompted a concerted and direct response from the state’s political branches. On September 2016, Governor Charles Baker issued Executive Order No. 569: “Establishing an Integrated Climate Change Strategy for the Commonwealth.”³²⁹ The order

required the DEP to promulgate a regulatory scheme by August 11, 2017, that would establish annual reductions in the state's GHG emissions.³³⁰

Although the outcome of *Kain* is promising and a sign of progress, tangible emissions reductions do not result from a signature on an executive order. The importance of continued judicial oversight is evidenced by the Washington ATL case discussed below.

a. ATL in Washington: Foster v. Department of Ecology

In the *Washington* ATL action, the Department of Ecology (DOE) denied the youth plaintiffs' petition for science-based rulemaking, and the plaintiffs appealed to the Washington Superior Court. In *Foster v. Washington Department of Ecology*,³³¹ Judge Hollis Hill issued her first opinion in June 2015, ordering DOE to reconsider its denial of the youths' petition.³³² While DOE was reconsidering its decision, the plaintiffs obtained a meeting with Governor Jay Inslee, after which Inslee issued a directive to the DOE to engage in the science-based rulemaking the youths were seeking.³³³ As a result, the DOE again denied the youths' petition on the ground that the executive directive initiated the rulemaking that the plaintiffs requested.³³⁴

The youths appealed again. In the ensuing decision, Judge Hill upheld the DOE's denial of the rulemaking petition, but not without declaring strong parameters defining the state's duty to

³³⁴ *Id.*

protect the atmosphere under the PTD.³³⁵ The court’s approach to interpreting the plaintiffs’ public trust rights was undoubtedly influenced by the dilatory climate response from the other branches of government. Judge Hollis had to look no further than the DOE’s own December 2014 report to find the agency’s response wholly inadequate. She stated:

The scientific evidence is clear that the current rates of reduction mandated by Washington law cannot achieve the GHG reductions necessary to protect our environment and to ensure the survival of an environment in which Petitioners can grow to adulthood safely. In fact, in its 2014 report to the legislature the Department stated, ‘Washington’s existing statutory limits should be adjusted to better reflect the current science. The limits need to be more aggressive in order for Washington to do its part to address climate risks.’³³⁶

Three months after the court’s dismissal, DOE dropped its rulemaking procedure, leading to another appeal. This time Hill responded by stating,

This is an extraordinary circumstance that we are facing here. . . . The reason I’m doing this is because this is an urgent situation. This is not a situation [in which] these children can wait. . . . Polar bears can’t wait, the people of Bangladesh can’t wait. I don’t have jurisdiction over their needs in this matter, but I do have jurisdiction in this court, and for that reason I’m taking this action.³³⁷

Judge Hill ordered DOE to promulgate an emissions reduction rule by the end of 2016 and to submit recommendations to the legislature concerning science-based reductions for the 2017 legislative session.³³⁸ She also directed DOE to consult with the plaintiffs before making those legislative recommendations.³³⁹ Instead, Governor Inslee appealed the decision, rolling out a

proposed clean air rule supported by the fossil fuel industry that fell short of the court's orders.³⁴⁰ The plaintiffs responded with a motion for contempt of court. Although Judge Hill denied the contempt motion, she did grant the plaintiffs' request to amend the original complaint to include a constitutional climate rights claim "due to the emergent need for coordinated science based action by the state of Washington to address climate change before efforts to do so are too costly and too late."³⁴¹ Judge Hill's order cited the *Juliana* decision in deciding that "[w]here a complaint alleges government action is affirmative and substantially damaging the climate system in a way that will cause human deaths, shorten human lifespans, result in widespread damage to property, threaten human food sources, and dramatically alter the planet's ecosystem, it states a claim for [a] due process violation."³⁴²

The court made clear that the youths would have their day in court to make their claims. Perhaps more importantly, the court seemed to embrace a judicial role because of the magnitude of the issue: "Because this court is fully advised in the matter thus far it retains jurisdiction to implement this ruling and proceed as expeditiously as possible."³⁴³ Thus, *Foster* became the first ATL action to progress firmly into the remedial stage of coordinated litigation.

³⁴³ *Id.* at 5.

In addition to the cases mentioned above, ongoing state ATL actions in Colorado, Maine, Oregon, and Pennsylvania have potential for positive outcomes.³⁴⁴ Although these decisions will not be binding in other states, the decisions could influence each other. Meanwhile, Our Children's Trust is formulating additional actions in Hawaii, North Carolina, Florida and other states.³⁴⁵

B. Atmospheric Trust and PTD Litigation Worldwide

The ATL campaign draws upon the public trust principle in large part because it is a universal principle of ecological obligation, now recognized by other nations as well as the United States. The idea is that, in the wake of a failure of international treaty negotiations, domestic courts of nations across the world could enforce climate obligations from a shared framework of fiduciary responsibility toward the common atmosphere.³⁴⁶ ATL suits seek to accomplish, through decentralized domestic litigation in countries across the globe, what has thus far eluded the centralized, international diplomatic treaty-making process. The ATL campaign characterizes all nations as co-trustees of the atmosphere, each holding a duty towards both their own citizens and their co-trustees of protecting the shared atmospheric trust.³⁴⁷ If the ATL approach were to succeed, domestic actions would force science-based carbon dioxide reduction, and therefore create tangible backing to the principles declared in the United Nations Framework Convention on Climate Change (UNFCCC), agreed to in 1992 by 192 nations of the world.³⁴⁸

³⁴⁴ For links to each case, see *State Judicial Actions Now Pending*, OUR CHILDREN'S TRUST (last visited Mar. 8, 2017), <https://www.ourchildrenstrust.org/pending-state-actions>.

³⁴⁷ See *id.*

³⁴⁸ United Nations Framework Convention on Climate Change, UNITED NATIONS (1992), <https://unfccc.int/resource/docs/convkp/conveng.pdf>.

Long before the ATL global litigation, many leading cases established the public trust as a recognized principle in legal systems throughout the world. In a pathbreaking 1993 decision from the Philippines, *Oposa v. Factoran*, the Philippines Supreme Court declared an inherent right to ecological balance “exist[ing] from the inception of humankind.”³⁴⁹ The lawsuit was brought by children and their parents to prevent the federal government from allowing private logging corporations to cut down the last remaining old growth forest in the country. Invoking the trust to enjoin any further logging, the Court declared:

Needless to say, every generation has a responsibility to the next to preserve that rhythm and harmony for the full enjoyment of a balanced and healthful ecology... . [T]he right to a balanced ecology ... belongs to a different category of rights [than civil and political rights] altogether for it concerns nothing less than self-preservation and self-perpetuation ... the advancement of which may even be said to predate all governments and constitutions.

As a matter of fact, these basic rights need not even be written in the Constitution for they are assumed to exist from the inception of humankind. If they are now explicitly mentioned ... it is because of the well-founded fear of its framers that unless the right to a balanced and healthful ecology and to health are mandated as state policies by the Constitution itself ... the day would not be too far when all else would be lost not only for the present generation, but also for those to come – generations which stand to inherit nothing but parched earth incapable of sustaining life.³⁵⁰

Indeed, the *Oposa* suit, brought on behalf of children, provided the template for suits in the atmospheric trust context nearly two decades later. Its declaration of an inherent constitutional right informed the *Juliana* court cited *Oposa*.³⁵¹ A subsequent case decided by the Philippines Supreme Court decision invoked the PTD in issuing a comprehensive injunction requiring the cleanup of pollution in Manila Bay.³⁵² That case also informs the remedy sought in the

³⁴⁹ *Oposa v. Factoran*, GR No 101083 (Sup Ct Phil 1993) (also rejecting the government’s claim that the case raised political questions unsuited for judicial resolution), reprinted in BLUMM & WOOD, *supra* note 96, at 341.

atmospheric trust cases, as the Philippines Supreme Court retained jurisdiction to supervise a number of agencies in following a comprehensive plan to clean up the bay.³⁵³

Other international recognition of the PTD includes the India Supreme Court's 1997 landmark decision enjoining a resort development on forest land adjacent to the Bees River, in which the court announced that "[u]nlike our laws, nature cannot be changed by legislative fiat; [natural law is] imposed on us by the natural world. An understanding of the laws of nature must therefore inform all of our social institutions."³⁵⁴ Other courts upholding PTD claims include those in Uganda, Kenya, Indonesia, South Africa, and Canada;³⁵⁵ many other jurisdictions have located the PTD in their constitutions' promise of a "right to life."³⁵⁶

Several international ATL cases reflect an awakening of the judiciary as the key institution to address the climate crisis. PTD actions abroad have in fact produced some resounding victories, including in the climate-change context. The most prominent of these was a 2015 decision of a Netherlands district court, which agreed with environmentalists that the country had to take action to reduce greenhouse gas emissions by 2020 to at least twenty-five percent below those of 1990.³⁵⁷ Since the Dutch government had already agreed to a fourteen to seventeen percent reduction, the

³⁵⁷ Urgenda Found. v. The State of the Netherlands (Ministry of Infrastructure and the Environment, Case No. C/09/456689/HA ZA 13-1396 (June 24, 2015), https://static1.squarespace.com/static/571d109b04426270152febe0/t/576c54812994cad806826f45/1466717314190/Verdict_UrgendaVDutchState.pdf). The Urgenda Foundation filed the case on behalf of some 900 Dutch citizens.

decision represented the first time a court intervened and pronounced the government's remedial efforts inadequate in light of the best available science.³⁵⁸ Moved by the severity and scope of the climate problem, the government's knowledge and the foreseeability of the damage, and the risk that hazardous changes in climate will occur, the court decided that the government had breached its duty of care and ordered the government to use its authorities to further reduce GHG emissions.³⁵⁹

The Dutch court cited the quarter-century old 1992 U.N. Climate Treaty as evidence that the Dutch government, in signing the treaty, had accepted responsibility to reduce emissions as much as necessary to avert climate catastrophe.³⁶⁰ The three-judge panel rejected the government's claim that judicial action was unwarranted because the solution to the global climate problem could not be resolved solely by Dutch efforts, since the country's per-capita emissions are among of the highest in the world, and any reduction of emissions will contribute to the prevention of dangerous climate change.³⁶¹ Moreover, the court ruled that there was sufficient evidence to assume a causal link between the Dutch greenhouse gas emissions, global climate change, and the effects (now and in the future) on the Dutch living climate.³⁶² The court explained that its decision was not an unwarranted intrusion on the political branches of government.³⁶³ The decision was the first to invoke human rights as a basis to protect individuals against climate

change. In many significant respects, the Netherlands decision responded to the same arguments faced by the *Juliana* court and state courts in ATL cases.

Other cases also have met with success. In Pakistan, a farmer brought a case alleging that climate inaction (both with respect to emissions reduction and mitigation) violated the fundamental constitutional rights to life and dignity and the public trust doctrine.³⁶⁴ Underscoring these rights, the Lahore High Court embarked on a classic structural injunction remedy, creating an administrative judicial apparatus to supervise the undertaking of climate actions, ordering the establishment of a Climate Change Commission comprised of high cabinet officials.³⁶⁵ Directing the commission to carry out the climate changes forged through a framework formulated but never implemented by the government, the court's order contemplated ongoing reports and judicial supervision.³⁶⁶ Later, in the spring of 2016, a seven-year-old girl filed a separate lawsuit in the Pakistan Supreme Court, asserting that the government, through the exploitation and promotion of fossil fuels, had violated the PTD and the youngest generation's constitutional rights to life, liberty, property, human dignity, and equal protection of the law.³⁶⁷ A few short months later, reversing a registrar's earlier rejection of the constitution petition, the court ruled that the youth plaintiff's climate change lawsuit should proceed to the merits of the case.³⁶⁸

In Ukraine youth secured a swift partial victory when the court ordered government to prepare an assessment of the country's progress toward realizing the reduction goals set by the

Kyoto Protocol.³⁶⁹ Other atmospheric trust petitions and lawsuits, tailored to the laws and circumstances of the particular country, are pending. In the Philippines, youth brought a broad petition, asking the courts to reconfigure the road system to allow non-fossil fuel transportation.³⁷⁰ In Norway, citizens sued to prevent the government from allowing oil drilling in the Arctic Barents Sea, asserting rights declared in a constitutional amendment that was passed just two years before and asserting a public trust right to a healthful environment “that will be safeguarded for future generations as well.”³⁷¹ Actions are planned in other countries, including Canada, France, Australia, England, Belgium, and India.³⁷²

Conclusion

The *Juliana* decision was clearly a pathbreaking one, finding the right to a stable climate system protected by constitutional due process, including the PTD.³⁷³ Key to the former was a determination that the right to a stable climate system was a fundamental right protected by the due process clause of the Constitution.³⁷⁴ As a fundamental right, the court gave strict scrutiny to the plaintiffs’ claims and the government’s responses.³⁷⁵ Deciding there was a fundamental right to a healthy atmosphere, given the stakes involved and the growing precedent in support, seemed no great reach from previously recognized fundamental rights to privacy, procreation, marriage, and interstate travel.³⁷⁶

³⁷⁶ See *supra* notes 166–71 and accompanying text.

The *Juliana* court’s determination that the Constitution proscribed the government’s interference with the youths’ PTD rights was in keeping with considerable international precedent.³⁷⁷ Although the court did not decide that the atmosphere was a public trust resource—although it cited sufficient authority to do so³⁷⁸—Judge Aiken did rule that the close relationship between atmospheric GHG pollution and adverse effects on trust resources like oceans and navigable waters could produce a PTD violation.³⁷⁹ In short, the court regarded the atmosphere as a resource ancillary to trust resources like the ocean and the territorial seas. The approach parallels other courts’ protection of corollary resources and public access to them. For example, courts have secured public access to dry sand beaches, finding such access necessary to full enjoyment of the traditional public trust in tidelands,³⁸⁰ In the same vein, courts have protected non-navigable tributaries to navigable waters held in trust, and have extended trust protection to groundwater with a hydrological connection to surface trust waters.³⁸¹

Judge Aiken closed her opinion by noting that federal courts “have been . . . overly deferential in the area of environmental law, and the world has suffered for it.”³⁸² She pointed to Judge Alfred Goodwin’s decision in the Oregon beach case,³⁸³ which found a public right to access

the beach based on customary rights.³⁸⁴ Judge Aiken stated that the case had “strong echoes” of the claims of the Oregon case in *Juliana*.³⁸⁵ At a time in which the U.S. Supreme Court seems prepared to reconsider its doctrine of judicial deference to administrative decision making,³⁸⁶ the *Juliana* case provides cogent reasoning for a judicial check on the political branches—certainly where the survival interests of young people and future generations are at stake.

The fact that Judge Aiken was the first judge to recognize that due process liberty includes a right to a stable climate system should not surprise students of American legal history. Rights today widely recognized as fundamental—like First Amendment rights to religion and speech—were not commonly recognized by the federal courts until over a century-and-a-half after the ratification of the First Amendment.³⁸⁷ As Justice Kennedy has acknowledged, sometimes fundamental liberty rights are “not always see[n] . . . in our own times . . .”, but the Framers “did not presume to know the extent of freedom in its all its dimensions, so they entrusted to future generations the charter of protecting the right of all persons to enjoy liberty as we learn its meaning.”³⁸⁸ Sometimes court decisions like *Juliana* serve educative functions, as did the Supreme Court’s historic decision in *Brown v. Board of Education*, which ruled that racial

³⁸⁵ See *Juliana*, at * 27. Judge Aiken did note that one member of the Oregon Supreme Court thought that the state’s beaches should have been declared subject to public use by virtue of the PTD. *Id.* at *27, n. 14 (citing Justice Denecke’s concurrence, *Hay*, 462 P.2d at 679).

³⁸⁶ See Amanda Reilly, *Chevron Doctrine on the Ropes as Trump Era Looms*, Greenwire (Dec. 9, 2016), <http://www.eenews.net/greenwire/stories/1060046945/search?keyword=Chevron+deference>; Lisa Heinzerling, *The Power Canons*, 58 Wm. & Mary L. Rev. ____ (forthcoming, 2017), <https://ssrn.com/abstract=2757770> (asserting that the Supreme Court has embraced new canons of statutory interpretation and identifying situations in which “the Court took interpretive power from an administrative agency, power that would normally have been the agency’s due under *Chevron*, and kept it for itself,” reflecting a basic distrust of an active administrative state).

³⁸⁷ See *West Virginia Bd. of Education v. Barnette*, 319 U.S. 624 (1943) (in an unprecedented decision, the Supreme Court overturned a decision only three years old, *Minersville School Dist. v. Gobitis*, 310 U.S. 586 (1940), and ruled that the free speech clause of the First Amendment protected schoolchildren from being forced to salute the American flag and say the pledge of allegiance in school).

³⁸⁸ *Juliana*, at *15 (quoting Justice Kennedy in his *Obergefell* opinion).

discrimination in public education is unconstitutional.³⁸⁹ Although it took a decade, *Brown* led to the Civil Rights Act of 1964³⁹⁰ and the Voting Rights of 1965,³⁹¹ which effectively ended U.S. *de jure* racial segregation after some 400 years. Some day *Juliana* may be seen in the same broad educative light as *Brown*.

But at the moment the *Juliana* decision, resting as it does on constitutional rights, seems the last bulwark against a reckless ramp-up of fossil fuel production in the United States that could push the planet past irreversible tipping points. The right to a stable climate system, like the right to marry and the right to racial non-discrimination, if not originally among those rights the Framers thought were constitutionally protected, is certainly “deeply rooted in this Nation’s history and tradition” and “fundamental to our scheme of ordered liberty.”³⁹² And too, a stable climate system remains the linchpin to the full ecological endowment secured by the public trust principle. With the climate they will inherit clearly in the balance, the *Juliana* decision paves the way for courts to require the other branches of government to take remedial action before the crisis spirals completely out of humanity’s control.
